1. NATURE OF OPERATIONS AND GOING CONCERN, BASIS OF PRESENTATION AND RECENT ACCOUNTING PRONOUNCEMENTS

Business

InVivo Therapeutics Holdings Corp., including its subsidiary, (the "Company") is a biomaterials and biotechnology company with a focus on the treatment of spinal cord injuries ("SCIs"). The Company's proprietary technologies incorporate intellectual property that is licensed under an exclusive, worldwide license from Boston Children's Hospital ("BCH") and the Massachusetts Institute of Technology ("MIT"), as well as intellectual property that has been developed internally in collaboration with its advisors and partners.

Since its inception, the Company has devoted substantially all of its efforts to business planning, research and development, recruiting management and technical staff, acquiring operating assets, and raising capital. The Company has historically financed its operations primarily through the sale of equity-related securities. As of March 31, 2021, the Company had unrestricted consolidated cash and cash equivalents of \$24.8 million. Given the Company's current plans, the Company estimates cash resources will be sufficient to fund its operations through the second quarter of 2023. The Company has not achieved profitability and may not be able to realize sufficient revenue to achieve or sustain profitability in the future. The Company does not expect to be profitable in the next several years, but rather expects to incur additional operating losses. The Company has limited liquidity and capital resources and must obtain significant additional capital resources in order to sustain its product development efforts, for acquisition of technologies and intellectual property rights, for preclinical and clinical testing of its anticipated products, pursuit of regulatory approvals, acquisition of capital equipment, laboratory and office facilities, establishment of production capabilities, for selling, general and administrative expenses, and other working capital requirements. The Company may raise capital through a combination of equity offerings, debt financings, other third-party funding, marketing and distribution arrangements, and other collaborations, strategic alliances, and licensing arrangements. The Company believes that it can be successful in obtaining additional capital; however, no assurance can be provided that it will be able to do so. There is no assurance, moreover, that any funds raised will be sufficient to enable the Company to attain profitable operations or continue as a going concern.

As a result of the COVID-19 pandemic, a significant number of the Company's clinical sites temporarily suspended enrollment into the INSPIRE 2.0 Study at their institution in 2020. As such, the COVID-19 pandemic did affect and may continue to affect the potential for enrollment in the Company's INSPIRE 2.0 Study in the event that clinical sites may again suspend studies in the future in order to manage the pandemic. Aside from the impact on enrollment in the Company's INSPIRE 2.0 Study, the Company did not experience any significant impact from the COVID-19 pandemic on its financial condition, liquidity, other operations, suppliers, industry, and workforce during the three months ended March 31, 2021. As of May 7, 2021 the Company has 18 clinical sites open for enrollment in the INSPIRE 2.0 Study, which is the total number of sites it had activated for the INSPIRE 2.0 Study. The full impact of the COVID-19 pandemic continues to evolve as of the date of filing this Quarterly Report on Form 10-Q, and the Company cannot be certain what future impact the COVID-19 pandemic may have on its clinical sites and their respective abilities to enroll patients. As the pandemic continues to evolve, there may be additional government actions or disruptions that could cause the Company's clinical sites to suspend or alter operations in a manner that would impact enrollment of the INSPIRE 2.0 Study. The Company is actively monitoring the impact of the global situation on its financial condition, liquidity, operations, suppliers, industry, and workforce, as there remains significant uncertainty related to the COVID-19 pandemic globally. Given the daily evolution of the COVID-19 pandemic and the global responses to curb its spread, the Company is not able to estimate the ultimate effects of the COVID-19 pandemic on its future results of operations, financial condition, or liquidity in the future. However, as the COVID-19 pandemic continues, it may continue to have an adverse effect on enrollment in the Company's INSPIRE 2.0 Study, and may also have an adverse effect on the Company's results of future operations, financial position, and liquidity, and even after the COVID-19 pandemic has subsided, the Company may continue to experience adverse impacts to its business as a result of any economic recession or depression that has occurred or may occur in the future.

Going Concern

The Company's consolidated financial statements as of March 31, 2021 were prepared under the assumption that the Company will continue as a going concern. As of March 31, 2021, the Company had unrestricted cash and cash equivalents of \$24.8 million. Given the Company's current development plans, the Company estimates cash resources will be sufficient to fund its operations, through the second quarter of 2023.

The Company's ability to continue as a going concern depends on its ability to obtain additional equity or debt financing, attain further operating efficiencies, manage expenditures, and, ultimately, to generate revenue. If the Company is unable to continue as a going concern, it may have to liquidate its assets and may receive less than the value at which those assets are carried on its audited financial statements, and it is likely that investors will lose all or part of their investment.

Reverse Stock Split

On February 11, 2020, the Company effected a reverse stock split of its common stock, par value \$0.00001 per share, at a ratio of 1-for-30 (the "2020 Reverse Stock Split"). As a result of the 2020 Reverse Stock Split, (i) every 30 shares of the issued and outstanding common stock were automatically converted into one newly issued and outstanding share of common stock, without any change in the par value per share; (ii) the number of shares of common stock into which each outstanding warrant or option to purchase common stock is exercisable was proportionally decreased, and (iii) the number of authorized shares of common stock outstanding was proportionally decreased. Shares of common stock underlying outstanding stock options and other equity instruments convertible into common stock were proportionately reduced and the respective exercise prices, if applicable, were proportionately increased in accordance with the terms of the agreements governing such securities.

All of the Company's historical share and per share information related to issued and outstanding common stock and outstanding options and warrants exercisable for common stock in these consolidated financial statements were adjusted, on a retroactive basis to reflect the 2020 Reverse Stock Split.

Basis of Presentation

The accompanying unaudited consolidated financial statements have been prepared in conformity with generally accepted accounting principles in the United States ("U.S. GAAP") consistent with those applied in, and should be read in conjunction with, the Company's audited consolidated financial statements and related footnotes for the year ended December 31, 2020 included in the Company's Annual Report on Form 10-K as filed with the United States Securities and Exchange Commission ("SEC") on March 1, 2021. The unaudited consolidated financial statements reflect all adjustments, consisting only of normal recurring adjustments, which are, in the opinion of management, necessary for a fair presentation of the Company's financial position as of March 31, 2021 and its results of operations and cash flows for the interim periods presented, and are not necessarily indicative of results for subsequent interim periods or for the full year. The interim consolidated financial statements do not include all of the information and footnotes required by U.S. GAAP for complete financial statements, as allowed by the relevant SEC rules and regulations; however, the Company believes that its disclosures are adequate to ensure that the information presented is not misleading.

2. CASH AND CASH EQUIVALENTS

The Company considers only those investments that are highly liquid, readily convertible to cash, and that mature within 3 months from date of purchase to be cash equivalents. From time to time, the Company may have cash balances in financial institutions in excess of insurance limits. The Company has not experienced any losses related to these balances. Management believes it is not exposed to significant credit risk.

Cash and cash equivalents consisted of the following:

	N	1arch 31,	December 31,		
(In thousands)	2021			2020	
Cash	\$	52	\$	(13)	
Money market funds		24,715		19,506	
Total cash and cash equivalents	\$	24,767	\$	19,493	

3. RESTRICTED CASH

Restricted cash as of March 31, 2021 and December 31, 2020 was \$110 thousand. Restricted cash as of each of March 31, 2021 and December 31, 2020 included a \$50 thousand security deposit related to the Company's credit card account and a \$60 thousand standby letter of credit in favor of a landlord (see Note 5).

4. FAIR VALUES OF ASSETS AND LIABILITIES

The Company groups its assets and liabilities generally measured at fair value into three levels based on the markets in which the assets and liabilities are traded and the reliability of the assumptions used to determine fair value.

Level 1 — Valuation is based on quoted prices in active markets for identical assets or liabilities. Level 1 assets and liabilities generally include debt and equity securities that are traded in an active exchange market. Valuations are obtained from readily available pricing sources for market transactions involving identical assets or liabilities.

Level 2 — Valuation is based on observable inputs other than Level 1 prices, such as quoted prices for similar assets or liabilities, quoted prices in markets that are not active, or other inputs that are observable or can be corroborated by observable market data for substantially the full term of the assets or liabilities.

Level 3 — Valuation is based on unobservable inputs that are supported by little or no market activity and that are significant to the fair value of the assets or liabilities. Level 3 assets and liabilities include financial instruments whose value is determined using pricing models, discounted cash flow methodologies, or similar techniques, as well as instruments for which the determination of fair value requires significant management judgment or estimation.

Assets and liabilities measured at fair value on a recurring basis are summarized below:

As of March 31, 2021						
Level 1	Level 2	Level 3	Fair Value			
\$ 24,715	<u> </u>	<u>\$</u>	\$ 24,715			
	As of Decem	ber 31, 2020				
Level 1	Level 2	Level 3	Fair Value			
\$ 19,506	<u>\$</u>	<u>\$</u>	\$ 19,506			
	\$ 24,715 Level 1	Level 1 Level 2 \$ 24,715 \$ —	Level 1 Level 2 Level 3 \$ 24,715 \$ — \$ — As of December 31, 2020 Level 1 Level 2 Level 3			

During the three months ended March 31, 2021 and 2020, there were no transfers between levels. The fair value of the Company's cash equivalents, consisting of a money market fund, is based on quoted market prices in active markets with no valuation adjustment.

The Company believes the carrying amounts of its prepaid expenses and other current assets, restricted cash, accounts payable and accrued expenses approximate their fair value due to the short-term nature of these amounts.

5. COMMITMENTS AND CONTINGENCIES

Operating Leases

On May 3, 2018, the Company entered into a sublease for 5,104 square feet of space for its corporate offices and laboratory space in Cambridge, Massachusetts (the "Cambridge Lease"). The Cambridge Lease commenced on May 3, 2018 and expires on October 31, 2023 with no renewal options. The Cambridge Lease contains rent holiday and rent escalation clauses. In connection with the Cambridge Lease, a standby letter of credit was established for \$40 thousand. On November 1, 2018, the standby letter of credit was increased to \$60 thousand. Under the Cambridge Lease, the Company will be required to pay its proportionate share of certain operating costs and property taxes applicable to the leased premises in excess of new base year amounts. These costs are considered to be variable lease payments and are not included in the determination of the lease's right-of-use asset or lease liability.

The Company identified and assessed the following significant assumptions in recognizing its right-of-use assets and corresponding lease liabilities:

- As the Cambridge Lease does not provide an implicit rate, the Company estimated the incremental borrowing rate in calculating the present value of the lease payments. The Company has estimated its incremental borrowing rate based on electing the remaining lease term as of the adoption date.
- Since the Company elected to account for each lease component and its associated non-lease components as a single combined component, all contract consideration was allocated to the combined lease component.
- The expected lease terms include noncancelable lease periods.

The elements of lease expense are as follows:

	Three Months Ended March 31,				
Lease cost (In thousands)		2021		2020	
Operating lease cost	\$	91	\$	91	
Short-term lease cost		2		8	
Variable lease cost		27		25	
Total lease cost	\$	120	\$	124	
Other information (In thousands) Cash paid for amounts included in the measurement of lease liabi	lities:				
Operating cash flows from short term leases	\$	2	\$	8	
Operating cash flows from operating leases		95		93	
Total cash paid for leases	\$	97	\$	101	
Weighted-average remaining lease term - operating leases		2.6 Years		3.6 Years	
Weighted-average discount rate - operating leases		7.0%		7.0%	

Maturities of lease liabilities due under the Cambridge Lease as of March 31, 2021 is as follows:

Leases (In thousands)	As of Ma	arch 31, 2021
2021(excluding the 3 months ended March 31, 2021)	\$	290
2022		398
2023		339
Total lease payments	'	1,027
Less: imputed interest		(86)
Present value of lease liabilities	\$	941

Right-of-use lease assets and lease liabilities are reported in the Company's consolidated balance sheets as follows:

Leases (In thousands)	Classification	March 31, 2021		March 31, 2021		March 31, 2021		December 3	31, 2020
Assets									
Lease asset, net	Operating	\$	853	\$	928				
Total lease assets		\$	853	\$	928				
Liabilities									
Current	Operating	\$	336	\$	327				
Non-current	Operating		605		693				
Total lease liabilities		\$	941	\$	1,020				

Clinical Trial Commitments

The Company has engaged and executed contracts with clinical research organizations ("CROs") to assist with the administration of its ongoing INSPIRE 1.0 and INSPIRE 2.0 clinical trials. As of March 31, approximately \$4 million remains to be paid on these contracts. The timelines and related costs necessary to complete these trials may vary depending on a number of factors including the rate of patient enrollment into our INSPIRE 2.0 trial. In the event the Company were to terminate the INSPIRE 2.0 trial, certain financial penalties would become payable to the CROs for costs to wind down the terminated trial.

6. FIXED ASSETS

Property, equipment, and leasehold improvements, net consisted of the following:

(In thousands)	March 31, 2021		ember 31, 2020
Computer software and hardware	\$ 40	\$	40
Research and lab equipment	520		520
Leasehold improvements	66		66
Property and equipment	 626		626
Less accumulated depreciation	(550)		(541)
Property and equipment, net	\$ 76	\$	85

Depreciation expense for the three months ended March 31, 2021 and 2020, was \$9 thousand and \$7 thousand, respectively. Maintenance and repairs are charged to expense as incurred and any additions or improvements are capitalized.

7. INTANGIBLE ASSETS

Intangible assets, included in "other assets," consisted of patent licensing fees paid to license intellectual property. In July 2007, the Company entered into a worldwide exclusive license (the "BCH License") for patents co-owned

by BCH and MIT initially covering the use of biopolymers to treat spinal cord injuries, and to promote the survival and proliferation of human stem cells in the spinal cord. During 2011, the BCH License was amended, and the Company obtained additional rights for use in the field of peripheral nerve injuries. The BCH License, as amended, has a 15-year term, or as long as the life of the last expiring patent right thereunder, whichever is longer, unless terminated earlier by the licensor, under certain conditions as defined in the related license agreement. In connection with the BCH License, the Company paid an initial \$75 thousand licensing fee and is required to pay certain annual maintenance fees, milestone payments and royalties. License fees are capitalized and the gross total as of March 31, 2021 and December 31, 2020 was \$200 thousand. The Company accounts for milestone payments, maintenance fees and royalties when they become due and payable. During the three months ended March 31, 2021 and 2020, the Company did not pay any milestone payments. The Company is amortizing the license fee as a research and development expense over the 15-year term of the license.

Intangible assets, net consisted of the following:

(In thousands)	March 31, 2021	Dec	cember 31, 2020
Patent licensing fee	\$ 200	\$	200
Accumulated amortization	(196)		(191)
Other assets	\$ 4	\$	9

Amortization expense during the three months ended March 31, 2021 and 2020 was \$5 thousand and \$4 thousand, respectively.

8. ACCRUED EXPENSES

Accrued expenses consisted of the following:

(In thousands)	March 31, 2021		December 31, 2020	
Compensation	\$	237	\$	996
Clinical		138		5
Legal		21		17
Other accrued expenses		103		146
Total accrued expenses	\$	499	\$	1,164

9. EMPLOYEE BENEFIT PLAN

In November 2006, the Company adopted a 401(k) plan (the "Plan") covering all employees. Employees must be 21 years of age in order to participate in the Plan. Under the Plan, the Company has the option to make matching contributions. During the three months ended March 31, 2021 and 2020, the Company contributed \$21 thousand and \$19 thousand, respectively in matching cash contributions to employee 401(k) accounts.

10. COMMON STOCK

On January 21, 2020, the Company held its 2019 Annual Meeting of Stockholders (the "2019 Annual Meeting"). At the 2019 Annual Meeting, the Company's stockholders approved an amendment to the Company's Articles of Incorporation to increase the number of shares of authorized common stock from 25,000,000 to 500,000,000 (without giving effect to the 2020 Reverse Stock Split). On February 11, 2020, the Company effected the 2020 Reverse Stock Split and the number of shares of authorized common stock was reduced to 16,666,667. On August 4, 2020, the Company held its 2020 Annual Meeting of Stockholders (the "2020 Annual Meeting"). At the 2020 Annual Meeting, the Company's stockholders approved an amendment to the Company's Articles of Incorporation to increase the number of shares of authorized common stock from 16,666,667 to 50,000,000 shares. As of

March 31, 2021, and December 31, 2020, 34,264,756 and 23,631,886 shares were issued and outstanding, respectively.

In October 2020, the Company completed a registered public offering (the "October 2020 Offering") in which it sold an aggregate of (i) 11,785,000 shares of common stock, (the "October 2020 Shares") and Series A Warrants exercisable for an aggregate of 11,785,000 shares of the Company's common stock (the "October 2020 Series A Warrants") at a combined public offering price of \$0.80 per share and associated warrant and (ii) pre-funded Series B warrants exercisable for an aggregate of 6,965,000 shares of common stock (the "October 2020 Series B Pre-funded Warrants") and Series A Warrants exercisable for an aggregate of 6,965,000 shares of the Company's common stock (also the "October 2020 Series A Warrants") at a combined public offering price of \$0.80 per pre-funded warrant and associated warrant. Each October 2020 Series A Warrant has an exercise price of \$0.80 per share, is exercisable immediately and expires in October 2025. Each October 2020 Series B Pre-funded Warrant has an exercise price of \$0.00001 per share, is exercisable immediately, and expires when exercised in full, subject to certain conditions. In connection with the October 2020 Offering, the Company issued, to designees of H.C. Wainwright & Co., LLC ("Wainwright") the placement agent for the October 2020 Offering, warrants (the "October 2020 Placement Agent Warrants") to purchase an aggregate of 1,218,750 shares of the Company's common stock, which represents a number of shares of common stock equal to 6.5% of the aggregate number of shares of common stock and October 2020 Series B Pre-funded Warrants sold in the October 2020 Offering. The October 2020 Placement Agent Warrants have an exercise price of \$1.00 per share, are immediately exercisable and expire in October 2025. The net proceeds to the Company, after deducting Wainwright's placement agent fees and other offering expenses payable by the Company, were approximately \$13.5 million. The Company assessed whether the October 2020 Series A Warrants, October 2020 Series B Pre-funded Warrants and the October 2020 Placement Agent Warrants required accounting as derivatives and determined that they were (1) indexed to the Company's own stock and (2) classified in stockholders' equity in accordance with Accounting Standards Codification ("ASC") Topic 815, Derivatives and Hedging. As such, the Company concluded that the October 2020 Series A Warrants, October 2020 Series B Pre-funded Warrants and the October 2020 Placement Agent Warrants meet the scope exception for determining whether the instruments require accounting as derivatives and accordingly are classified in stockholders' equity. The fair value of the October 2020 Series A Warrants and October 2020 Placement Agent Warrants was estimated at \$8.7 million and \$551.3 thousand, respectively, using a Black-Scholes model with the following assumptions: expected volatility of 119.13%, risk free interest rate of 0.35%, expected life of 5 years and no dividends. The October 2020 Series B Pre-funded Warrants had an intrinsic value of approximately \$5.6 million. There are no outstanding October 2020 Series B Prefunded Warrants as of as of March 31, 2021. During the three months ended March 31, 2021 the Company issued an aggregate of 10,620,682 and 12,188 shares of common stock upon the exercise of certain of the October 2020 Series A Warrants and October 2020 Placement Agent Warrants, respectively, for aggregate proceeds of \$8.5 million.

In April 2020, the Company entered into a securities purchase agreement (the "April 2020 Purchase Agreement") with certain institutional investors (the "April 2020 Purchasers"), pursuant to which the Company agreed to sell and issue, in a registered direct offering, an aggregate of 1,715,240 of common stock, at a purchase price per share of \$1.75 (the "April 2020 Shares"; the offering, the "April 2020 Registered Offering"). The April 2020 Shares were offered by the Company pursuant to a shelf registration statement on Form S-3, which was declared effective by the SEC on November 14, 2019 (File No. 333-234353) and a prospectus supplement thereunder. Pursuant to the April 2020 Purchase Agreement, in a concurrent private placement, the Company also issued to the April 2020 Purchasers warrants (the "April 2020 Series C Warrants") to purchase up to 1,715,240 shares of common stock (the "Private Placement" and together with the April 2020 Registered Offering, the "April 2020 Offerings"). The April 2020 Series C Warrants are exercisable immediately at an exercise price of \$1.62 per share of common stock, subject to adjustment in certain circumstances, and expire on October 17, 2025. In connection with the April 2020 Offerings, the Company also issued to Wainwright, warrants to purchase an aggregate of 111,491 shares of the Company's common stock ("April 2020 Placement Agent Warrants") which represents a number of shares of common stock equal to 6.5% of the aggregate number of April 2020 Shares sold in the April 2020 Registered Offering, at an exercise price of \$2.1875 per share with a term expiring on April 15, 2025. The net proceeds to the Company, after deducting Wainwright's placement agent fees and other offering expenses payable by the Company, were approximately \$2.6 million. The Company assessed whether the April 2020 Series C Warrants,

and the April 2020 Placement Agent Warrants required accounting as derivatives and determined that they were (1) indexed to the Company's own stock and (2) classified in stockholders' equity in accordance with ASC Topic 815, Derivatives and Hedging. As such, the Company concluded that the April 2020 Series C Warrants and the April 2020 Placement Agent Warrants meet the scope exception for determining whether the instruments require accounting as derivatives and accordingly are classified in stockholders' equity. The fair value of the April 2020 Series C Warrants was estimated at \$2.1 million, using a Black-Scholes model with the following assumptions: expected volatility of 115.84%, risk free interest rate of 0.40%, expected life of 5.5 years and no dividends. The fair value of the April 2020 Placement Agent Warrants was estimated at \$128 thousand, using a Black-Scholes model with the following assumptions: expected volatility of 116.14%, risk free interest rate of 0.36%, expected life of 5 years and no dividends. The Company did not issue any shares as a result of either the April 2020 Series C Warrants or April 2020 Placement Agent Warrants exercise activity during the three months ended March 31, 2021.

In March 2020, the Company completed a registered public offering (the "March 2020 Offering") in which it sold an aggregate of (i) 955,613 shares of common stock (the "March 2020 Shares") and Series A Warrants exercisable for an aggregate of 955,613 shares of the Company's common stock (the "March 2020 Series A Warrants") at a combined public offering price of \$2.75 per share and associated warrant and (ii) pre-funded Series B warrants exercisable for an aggregate of 1,589,842 shares of common stock (the "March 2020 Series B Warrants") and Series A Warrants exercisable for an aggregate of 1,589,842 shares of the Company's common stock (also the "March 2020 Series A Warrants") at a combined public offering price of \$2.75 per pre-funded warrant and associated warrant. Each March 2020 Series A Warrant has an exercise price of \$2.75 per share, is exercisable immediately and expires in March 2025. Each March 2020 Series B Warrant has an exercise price of \$0.00001 per share, is exercisable immediately, and expires when exercised in full, subject to certain conditions. In connection with the March 2020 Offering, the Company issued, to Wainwright the placement agent for the March 2020 Offering, warrants to purchase an aggregate of 165,455 shares of the Company's common stock (the "March 2020 Placement Agent Warrants"), which represents a number of shares of common stock equal to 6.5% of the aggregate number of shares of common stock and March 2020 Series B Warrants sold in the March 2020 Offering. The March 2020 Placement Agent Warrants have an exercise price of \$3.4375 per share, are immediately exercisable and expire in March 2025. The net proceeds to the Company, after deducting Wainwright's placement agent fees and other offering expenses payable by the Company, were approximately \$6.0 million. The Company assessed whether the March 2020 Series A Warrants, March 2020 Series B Warrants and the March 2020 Placement Agent Warrants required accounting as derivatives and determined that they were (1) indexed to the Company's own stock and (2) classified in stockholders' equity in accordance with ASC Topic 815, Derivatives and Hedging. As such, the Company concluded that the March 2020 Series A Warrants, March 2020 Series B Warrants and the March 2020 Placement Agent Warrants meet the scope exception for determining whether the instruments require accounting as derivatives and accordingly are classified in stockholders' equity. The fair value of the March 2020 Series A warrants and March 2020 Placement Agent Warrants was estimated at \$3.5 million and \$218 thousand, respectively, using a Black-Scholes model with the following assumptions: expected volatility of 115.22%, risk free interest rate of 0.63%, expected life of 5 years and no dividends. The March 2020 Series B Warrants had an intrinsic value of approximately \$4.4 million. During the three months ended March 31, 2020, the Company issued an aggregate of 1,016,537 shares of common stock upon the exercise of the March 2020 Series B warrants for an immaterial amount as they were substantially pre-funded. The Company did not issue any shares as a result of either the March 2020 Series A Warrant or March 2020 Placement Agent Warrants during the three months ended March 31, 2020. The Company did not issue any shares as a result of either the March 2020 Series A Warrant, March 2020 Series B Warrants or March 2020 Placement Agent Warrants during the three months ended March 31, 2021.

During the three months ended March 31, 2020 the Company issued an aggregate of 40,975 shares of common stock upon the exercise of certain warrants issued in 2018 for aggregate proceeds of \$286 thousand.

During the three months ended March 31, 2021, there was no exercise activity related to any of the warrants that were issued in 2018 and 2019.

During the three months ended March 31, 2020, as part of the adjustment to reflect the 2020 Reverse Stock Split, the Company issued an aggregate of 7,692 shares of common stock to account for the fractional roundup of shareholders.

The Company did not issue any shares as a result of the vesting of restricted stock units during either of the three months ended March 31, 2021, and 2020.

11. STOCK-BASED COMPENSATION

In 2007, the Company's Board of Directors adopted, and the Company's shareholders subsequently approved, the 2007 Employee, Director and Consultant Stock Plan (the "2007 Plan"). The 2007 Plan provided that the Company's Board of Directors (or committees and/or executive officers delegated by the Board of Directors) could grant incentive and nonqualified stock options to the Company's employees, officers, directors, consultants and advisors.

On October 26, 2010, the Company's Board of Directors adopted, and the Company's shareholders subsequently approved, the 2010 Equity Incentive Plan (as subsequently amended, the "2010 Plan"). The 2010 Plan provided for grants of incentive stock options to employees, and nonqualified stock options and restricted common stock to employees, consultants, and non-employee directors of the Company.

In April 2015, the Company's Board of Directors adopted, and the Company's shareholders subsequently approved, the 2015 Equity Incentive Plan (the "2015 Plan"). The 2015 Plan provides for grants of incentive stock options to employees, and nonqualified stock options, restricted common stock, restricted stock units ("RSUs"), and stock appreciation rights to employees, consultants, and non-employee directors of the Company.

Upon approval of the 2015 Plan by the Company's shareholders on June 16, 2015, the 2010 Plan was terminated and no additional shares or share awards have been subsequently granted under the 2010 Plan. In March 2019, the Company's Board of Directors approved, and recommended to the Company's shareholders for approval, an amendment to the 2015 Plan (the "2015 Plan Amendment"), and on January 21, 2020, the Company's shareholders subsequently approved the 2015 Plan Amendment. The 2015 Plan Amendment increased the maximum number of shares reserved for issuance under the 2015 Plan by 26,667 shares to a total of 32,000 shares. In June 2020, the Company's Board of Directors approved, and recommended to the Company's shareholders for approval, another amendment to the 2015 Plan to increase the number of shares available for issuance by 400,000 shares, and on August 4, 2020, the Company's shareholders subsequently approved that amendment. As of March 31, 2021, the total number of shares available to be issued under the 2015 Plan was 67,419 shares, consisting of (i) 5,333 shares initially authorized under the 2015 Plan shares, (ii) the shares that remained available for grant under the 2010 Plan at the time of its termination adjusted for cumulative cancellations, forfeitures and issuances from the 2010 Plan and 2015 Plan, (iii) the 26,667 shares approved for increase during the January 2020 shareholders meeting and, (iv) the 400,000 shares approved for increase during the 2020 Annual Meeting.

Options issued under the 2007 Plan, 2010 Plan, and 2015 Plan (collectively, the "Plans") are exercisable for up to 10 years from the date of issuance.

Stock-based compensation

For the three month periods ended March 31, 2021 and 2020, Stock-based compensation recognized was classified in the consolidated statements of operations as follows:

	Three Months Ended March 31,			
(In thousands)		2021		2020
Research and development	\$	3	\$	20
General and administrative		49		50
Total	\$	52	\$	70

The fair value of each option award is estimated on the date of grant using the Black-Scholes option pricing model, which uses the following assumptions; (i) Risk-free interest rate, (ii) Expected dividend yield, (iii) Expected term and (iv) Expected volatility. The Company uses historical data, as well as subsequent events occurring prior to the issuance of the financial statements, to estimate option exercises within the valuation model. The expected term of options granted under the Plans, all of which qualify as "plain vanilla," is based on the average of the contractual term (10 years) and the vesting period (generally, 48 months). For non-employee options, the expected term is the contractual term. The risk-free rate is based on the yield of a U.S. Treasury security with a term consistent with the option. The impact of forfeitures on compensation expense is recorded as they occur.

The Company grants RSUs and restricted stock awards ("RSAs"), collectively referred to as restricted securities under the 2015 Equity Incentive Plan. These restricted securities generally vest over a three-year period, contingent on the recipient's continued employment. Prior to vesting, all RSAs have the right to vote and receive dividends under the 2015 Equity Incentive Plan; however, the Company's form of Restricted Stock Agreement provides that the payment of dividends on unvested RSAs shall be deferred until such time as the shares vest. The grant date fair value of these awards is based on the fair market value of our common stock on the date of grant.

The Company did not grant any awards during the three months ended March 31, 2020. The assumptions used principally in determining the fair value of options granted during the three months ended March 31, 2021 were as follows:

	March 31, 2021
Risk-free interest rate	1.03%
Expected dividend yield	0%
Expected term (employee grants)	5.70
Expected volatility	117.34%

Stock options

A summary of option activity as of March 31, 2021 and changes for the three month period then ended are presented below:

Options	Shares	Weighted Average Exercise Price	Weighted Average Remaining Aggregate Contractual Intrinsic Term in Years Value
Outstanding as of December 31, 2020	4,169	\$ 1,054.01	7.18 \$ —
Granted	360,000	\$ 1.10	
Cancelled/Forfeited	(147)	\$ 6,324.03	
Outstanding as of March 31, 2021	364,022	\$ 10.61	9.93 \$ —
Vested and Exercisable as of March 31, 2021	2,986	\$ 1,121.83	6.90 \$ —
Vested and expected to vest as of March 31, 2021	364,022	\$ 10.61	9.93 \$ —

The weighted-average grant-date fair value of stock options granted during the three months ended March 31, 2021 was \$0.93. The total fair value of options that vested in the three months ended March 31, 2021 and 2020 was \$53 thousand and \$56 thousand, respectively. For the three month periods ended March 31, 2021 and 2020, the Company recorded stock-based compensation expense of \$28 thousand and \$43 thousand, respectively related to stock options. As of March 31, 2021, total unrecognized compensation expense related to non-vested share-based option compensation arrangements amounted to \$367 thousand and is estimated to be recognized over a period of 1.63 years.

Restricted Securities

The following table summarizes the restricted securities activity under the 2015 Plan during the three month period ended March 31, 2021:

Restricted Securities	Number of Grants	eighted-Average nt Date Fair Value
Unvested balance as of December 31, 2020	6,402	\$ 25.67
Vested	_	\$ _
Forfeited	_	\$ _
Unvested balance as of March 31, 2021	6,402	\$ 25.67

For the three month periods ended March 31, 2021, and 2020, the Company recorded stock-based compensation expense of \$24 thousand and \$27 thousand, respectively, related to the time-based restricted securities As of March 31, 2021, total unrecognized compensation expense related to non-vested restricted securities amounted to \$96 thousand which the Company expects to recognize over a remaining weighted-average of 1.11 years. All the restricted securities that remain unvested and outstanding as of March 31, 2021 are subject to time-based vesting.

12. WARRANTS

The following table presents information about warrants to purchase common stock issued and outstanding as of March 31, 2021:

Year Issued	Defined Name	Classification	Number of Warrants		xercise Price as of March 31, 2021	Date of Expiration
2014	2014 Warrants	Equity	11	\$	352.50	5/9/2021
	2018 Series A	-				
2018	Warrants	Equity	211,921	\$	6.98	6/25/2023
	2019 Placement					
2019	Agent Warrants	Equity	15,168	\$	4.50	11/21/2024
	March 2020 Series					
2020	A Warrants	Equity	2,545,455	\$	2.75	3/10/2025
	March 2020					
	Placement Agent					
2020	Warrants	Equity	165,455	\$	3.4375	3/5/2025
	March 2020 Series					
2020	B Warrants	Equity	12,728	\$	0.00001	Until Fully Exercised
	April 2020 Series C			_		
2020	Warrants	Equity	1,680,240	\$	1.62	10/17/2025
	April 2020					
	Placement Agent			_		
2020	Warrants	Equity	111,491	\$	2.1875	4/15/2025
	October 2020					
2020	Placement Agent	.	4 000 500		4.00	40/00/005
2020	Warrants	Equity	1,206,562	\$	1.00	10/22/2025
2020	October 2020 Series	.	0.400.040		0.00	40/05/005
2020	A Warrants	Equity	8,129,318	\$	0.80	10/27/2025
Total			14,078,349			
Weighted average exercise	-			\$	1.41	
Weighted average life in ye	ears					4.41

13. NET LOSS PER COMMON SHARE

Basic and diluted net loss per share of common stock has been computed by dividing net loss by the weighted average number of shares outstanding during the period. Diluted net loss per share of common stock is computed by dividing net income by the weighted average number of shares outstanding plus the dilutive effect, if any, of outstanding stock options, warrants and convertible securities. In a net loss period, options, warrants, unvested restricted securities and convertible securities are anti-dilutive and, therefore, excluded from diluted loss per share calculations.

For the three months ended March 31, 2021 and 2020, the following potentially dilutive securities were not included in the computation of net loss per share because the effect would be anti-dilutive:

	March	March 31,		
	2021	2020		
Warrants	14,078,349	3,514,180		
Stock options	364,022	4,187		
Unvested RSUs	100	200		
Unvested RSAs	6,302	6,886		
Total potentially dilutive securities	14,448,773	3,525,453		

Item 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS.

The following management's discussion and analysis should be read in conjunction with the unaudited consolidated financial statements included elsewhere in this Quarterly Report and with our historical consolidated financial statements, and the related notes thereto, included in our Annual Report on Form 10-K for the year ended December 31, 2020 (the "2020 Annual Report"). The management's discussion and analysis contains forward-looking statements within the meaning of the safe harbor provisions under Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended (the "Exchange Act"). These statements include statements made regarding our commercialization strategy, future operations, cash requirements and liquidity, capital requirements, and other statements on our business plans and strategy, financial position, and market trends. In some cases, you can identify forward-looking statements by terms such as "may," "might," "will," "should," "believe," "plan," "intend," "anticipate," "target," "estimate," "expect," and other similar expressions. These forward-looking statements are subject to risks and uncertainties that could cause actual results or events to differ materially from those expressed or implied by the forward-looking statements in this Quarterly Report, including factors such as our ability to raise substantial additional capital to finance our planned operations and to continue as a going concern; our ability to execute our strategy and business plan; our ability to obtain regulatory approvals for our products, including the Neuro-Spinal ScaffoldTM; our ability to successfully commercialize our current and future product candidates, including the Neuro-Spinal Scaffold; the progress and timing of our development programs; market acceptance of our products; our ability to retain management and other key personnel; our ability to promote, manufacture, and sell our products, either directly or through collaborative and other arrangements with third parties; the impact of the COVID-19 pandemic and our response to it; and other factors detailed under "Risk Factors" in Part II, Item 1A of this Quarterly Report. These forward-looking statements speak only as of the date hereof. We do not undertake any obligation to update forward-looking statements to reflect events or circumstances occurring after the date of this Quarterly Report, except as required by law.

The discussion and analysis of our financial condition and results of operations are based on our consolidated financial statements, which we have prepared in accordance with U.S. generally accepted accounting principles. The preparation of these consolidated financial statements requires us to make estimates and assumptions that affect the reported amounts of assets and liabilities and the disclosure of contingent assets and liabilities at the date of the consolidated financial statements, as well as the reported revenues and expenses during the reporting periods. On an ongoing basis, we evaluate such estimates and judgments, including those described in greater detail below. We base our estimates on historical experience and on various other factors that we believe are reasonable under the circumstances, the results of which form the basis for making judgments about the carrying value of assets and liabilities that are not readily apparent from other sources. Actual results may differ from these estimates under different assumptions or conditions.

Overview

We are a research and clinical-stage biomaterials and biotechnology company with a focus on treatment of spinal cord injuries, or SCIs. Our approach to treating acute SCIs is based on our investigational $Neuro-Spinal\ Scaffold^{TM}\$ implant, a bioresorbable polymer scaffold that is designed for implantation at the site of injury within a spinal cord and is intended to treat acute SCI. The $Neuro-Spinal\ Scaffold\$ implant incorporates intellectual property licensed under an exclusive, worldwide license from Boston Children's Hospital, or BCH, and the Massachusetts Institute of Technology, or MIT. We also plan to evaluate other technologies and therapeutics that may be complementary to our development of the $Neuro-Spinal\ Scaffold\$ implant, such as stem cells, therapeutics or electrical stimulation, including in combination with learnings applied from our $Neuro-Spinal\ Scaffold\$ implant or technologies that offer the potential to bring us closer to our goal of redefining the life of the SCI patient.

The current standard of care for acute management of spinal cord injuries focuses on preventing further injury to the spinal cord. However, the current standard of care does not address repair of the spinal cord.

Our Clinical Program

We currently have one clinical development program for the treatment of acute SCI.

Neuro-Spinal Scaffold Implant for acute SCI

Our *Neuro-Spinal Scaffold* implant is an investigational bioresorbable polymer scaffold that is designed for implantation at the site of injury within a spinal cord. The *Neuro-Spinal Scaffold* implant is intended to promote appositional, or side-by-side, healing by supporting the surrounding tissue after injury, minimizing expansion of areas of necrosis, and providing a biomaterial substrate for the body's own healing/repair processes following injury. We believe this form of appositional healing may spare white matter, increase neural sprouting, and diminish post-traumatic cyst formation.

The *Neuro-Spinal Scaffold* implant is composed of 2 biocompatible and bioresorbable polymers that are cast to form a highly porous investigational product:

- Poly lactic-co-glycolic acid, a polymer that is widely used in resorbable sutures and provides the biocompatible support for *Neuro-Spinal Scaffold* implant; and
- Poly-L-Lysine, a positively charged polymer commonly used to coat surfaces in order to promote cellular attachment.

Because of the complexity of SCIs, it is likely that multi-modal therapies will be required to maximize positive outcomes in SCI patients. In the future, we may attempt to further enhance the performance of our *Neuro-Spinal Scaffold* implant by multiple combination strategies involving electrostimulation devices, additional biomaterials, drugs approved by the U.S. Food and Drug Administration, or FDA, or growth factors. We expect the *Neuro-Spinal Scaffold* implant to be regulated by the FDA as a Class III medical device.

INSPIRE 2.0 Study

Our Neuro-Spinal Scaffold implant has been approved to be studied under our approved Investigational Device Exemption, or IDE, in the INSPIRE 2.0 Study, which is titled the "Randomized, Controlled, Single-blind Study of Probable Benefit of the Neuro-Spinal Scaffold™ for Safety and Neurologic Recovery in Subjects with Complete Thoracic AIS A Spinal Cord Injury as Compared to Standard of Care." The purpose of the INSPIRE 2.0 Study is to assess the overall safety and probable benefit of the Neuro-Spinal Scaffold for the treatment of neurologically complete thoracic traumatic acute SCI. The INSPIRE 2.0 Study is designed to enroll 10 subjects into each of the 2 study arms, which we refer to as the Scaffold Arm and the Comparator Arm. Patients in the Comparator Arm will receive the standard of care, which is spinal stabilization without dural opening or myelotomy. The INSPIRE 2.0 Study is a single blind study, meaning that the patients and assessors are blinded to treatment assignments. The FDA approved the enrollment of up to 35 patients in this study so that there would be at least 20 evaluable patients (10 in each study arm) at the primary endpoint analysis, accounting for events such as screen failures or deaths that would prevent a patient from reaching the primary endpoint visit. As of May 7, 2021, 14 patients have been enrolled in the INSPIRE 2.0 Study and 18 sites are open for enrollment, which is the total number of sites activated for enrollment in the study. We have found the enrollment rates for the INSPIRE 2.0 study to be variable and inconsistent. For example, 2 of the 3 most recent patients enrolled into the study were enrolled on the same day, and prior to that, the 3 previous most recent patients enrolled into the study were enrolled over the course of four weeks between early December 2020 and early January 2021. Given the continued and recent unpredictable enrollment patterns, we are unable at this time to estimate when enrollment for the study may be complete. We aim to continue to provide quarterly updates regarding the number of patients enrolled into the study.

The primary endpoint is defined as the proportion of patients achieving an improvement of at least 1 American Spinal Injury Association Impairment Scale ("AIS") grade at 6 months post-implantation. Assessments of AIS grade are at hospital discharge, 3 months, 6 months, 12 months and 24 months. The definition of study success for INSPIRE 2.0 is that the difference in the proportion of subjects who demonstrate an improvement of at least 1 grade on AIS assessment at the 6-month primary endpoint follow-up visit between the Scaffold Arm and the Comparator Arm must be equal to or greater than 20%. In one example, if 50% of subjects in the Scaffold Arm have an improvement of AIS grade at the 6-month primary endpoint and 30% of subjects in the Comparator Arm have an improvement, then the difference in the proportion of subjects who demonstrated an improvement is equal to 20% (50% minus 30% equals 20%) and the definition of study success would be met. In another example, if 40% of subjects in the Scaffold Arm have an improvement of AIS grade at the 6-month primary endpoint and 30% of subjects in the Comparator Arm have an

improvement, then the difference in the proportion of subjects who demonstrated an improvement is equal to 10% (40% minus 30% equals 10%) and the definition of study success would not be met. Additional endpoints include measurements of changes in neurological level of injury, sensory levels and motor scores, bladder, bowel and sexual function, pain, Spinal Cord Independence Measure, and quality of life.

Our Neuro-Spinal Scaffold was previously studied in The INSPIRE Study: the "InVivo Study of Probable Benefit of the Neuro-Spinal Scaffold for Safety and Neurologic Recovery in Subjects with Complete Thoracic AIS A Spinal Cord Injury," under an IDE application for the treatment of neurologically complete thoracic traumatic acute SCI. Although The INSPIRE Study was structured with an Objective Performance Criterion, or the OPC as the primary component for demonstrating probable benefit, the OPC is not the only variable that the FDA would evaluate when reviewing a future human device exemption, or HDE, application. Similarly, while our INSPIRE 2.0 Study is structured with a definition of study success requiring a minimum difference between study arms in the proportion of subjects achieving improvement, that success definition is not the only factor that the FDA would evaluate in the future HDE application. Approval is not guaranteed if the OPC is met for The INSPIRE Study or the definition of study success is met for the INSPIRE 2.0 Study, and even if the OPC or definition of study success are not met, the FDA may approve a medical device if probable benefit is supported by a comprehensive review of all clinical endpoints and preclinical results, as demonstrated by the sponsor's body of evidence.

In 2016, the FDA accepted our proposed HDE modular shell submission and review process for the *Neuro-Spinal Scaffold* implant. The HDE modular shell is comprised of 3 modules: a preclinical studies module, a manufacturing module, and a clinical data module. As part of its review process, the FDA reviews each module, which are individual sections of the HDE submission, on a rolling basis. Following the submission of each module, the FDA reviews and provides feedback, typically within 90 days, allowing the applicant to receive feedback and potentially resolve any deficiencies during the review process. Upon receipt of all 3 modules, which constitutes the complete HDE submission, the FDA makes a filing decision that may trigger the review clock for an approval decision. We submitted the first module in March 2017 and received feedback in June 2017. We submitted an updated first module in the fourth quarter of 2019 and received feedback in September 2020. We submitted another updated first module in the April 2021. The HDE submission will not be complete until the manufacturing and clinical modules are also submitted.

Impact of COVID-19 Pandemic

As a result of the COVID-19 pandemic, a significant number of the Company's clinical sites temporarily suspended enrollment into the INSPIRE 2.0 Study at their institution in 2020. As such, the COVID-19 pandemic affected and may continue to affect the potential for enrollment in our INSPIRE 2.0 Study in the event that our clinical sites may again suspend studies in the future in order to manage the pandemic. Aside from the impact on enrollment in our INSPIRE 2.0 Study, we did not experience any significant impact from the COVID-19 pandemic on our financial condition, liquidity, other operations, suppliers, industry, and workforce for the three months ended March 31, 2021. As of May 7, 2021 we had 18 clinical sites open for enrollment in the INSPIRE 2.0 Study, which is the total number of sites we had activated for the INSPIRE 2.0 Study. Although all of our sites have resumed enrollment, the full impact of the COVID-19 pandemic continues to evolve as of the date of filing this Quarterly Report on Form 10-Q, and we cannot be certain what future impact the COVID-19 pandemic may have on our clinical sites and our respective abilities to enroll patients. As the pandemic continues to evolve, there may be additional government actions or disruptions that could cause our clinical sites to suspend or alter operations in a manner that would impact enrollment in the INSPIRE 2.0 Study. We are actively monitoring the impact of the global situation on our financial condition, liquidity, operations, suppliers, industry, and workforce, as there remains significant uncertainty related to the COVID-19 pandemic globally. Given the daily evolution of the COVID-19 pandemic and the global responses to curb its spread, we are not able to estimate the ultimate effects of the COVID-19 pandemic on our results of operations, financial condition, or liquidity in the future. However, as the COVID-19 pandemic continues, it may continue to have an adverse effect on enrollment in our INSPIRE 2.0 Study, and may also have an adverse effect on our results of future operations, financial position, and liquidity, and even after the COVID-19 pandemic has subsided, we may continue to experience adverse impacts to our business as a result of any economic recession or depression that has occurred or may occur in the future.

Critical Accounting Policies and Estimates

Our consolidated financial statements have been prepared in accordance with accounting principles generally accepted in the United States of America. The preparation of these consolidated financial statements requires

management to make estimates and assumptions and, in connection therewith, adopt certain accounting policies that affect the reported amounts of assets and liabilities and the disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues and expenses during the reporting period.

On an ongoing basis, we evaluate our estimates and judgments for all assets and liabilities, stock-based compensation expense, and the fair value determined for stock purchase warrants classified as derivative liabilities. We base our estimates and judgments on historical experience, current economic and industry conditions, and on various other factors that we believe to be reasonable under the circumstances. Such factors form the basis for making judgments about the carrying values of assets and liabilities that are not readily apparent from other sources. Actual results may differ from these estimates under different assumptions or conditions. There have been no changes in our critical accounting policies and estimates from the disclosure provided in our 2020 Annual Report.

We believe that the consolidated financial statements accurately reflect our best estimate of the results of operations, financial position, and cash flows for the periods presented.

Results of Operations

Comparison of the Three Months Ended March 31, 2021 and 2020

Research and Development Expenses

Research and development expenses consisted primarily of expenses related to contract research organizations and clinical sites, professional services, and payroll. Research and development expenses for the three months ended March 31, 2021 were \$1.0 million, a decrease of \$39 thousand compared to the three months ended March 31, 2020. The overall decrease in research and development expense is attributable to the timing of variable costs associated with our site initiation and patient enrollment initiatives in the current year.

General and Administrative Expenses

General and administrative expenses consisted primarily of payroll, rent, and professional services. General and administrative expenses for the three months ended March 31, 2021 were \$1.2 million, a decrease of \$165 thousand compared to the three months ended March 31, 2020. The decrease in general and administrative expenses for the three months ended March 31, 2021 is attributable primarily to the absence of business development and associated legal expenses related to a one-time strategic initiative conducted during the three months ended March 31, 2020.

Other Income and Expense

Other income for the three months ended March 31, 2021 and 2020, comprised primarily by interest income, were \$1 thousand and \$14 thousand, respectively.

Liquidity and Capital Resources

Since inception, we have devoted substantially all of our efforts to business planning, research and development, recruiting management and technical staff, acquiring operating assets, and raising capital. As of March 31, 2021, our accumulated deficit was \$230.5 million.

As of March 31, 2021, we had total assets of \$27.7 million, total liabilities of \$2.2 million, and total stockholders' equity of \$25.5 million. During the three months ended March 31, 2021, we recorded a net loss of \$2.2 million. We have not achieved profitability and may not be able to realize sufficient revenue to achieve or sustain profitability in the future. We do not expect to be profitable in the next several years, but rather expect to incur additional operating losses. We believe that our cash and cash equivalents as of March 31, 2021 will provide necessary funding to fund operations through the second quarter of 2023. This estimate is based on assumptions that may prove to be wrong; expenses could prove to be significantly higher, leading to a more rapid consumption of our existing resources. We have limited liquidity and capital resources and must obtain significant additional capital resources in order to fund our operations and sustain our product development efforts, for acquisition of technologies and intellectual property rights, for preclinical and clinical testing of our anticipated products, pursuit of regulatory approvals, acquisition of capital

equipment, laboratory and office facilities, establishment of production capabilities, for selling, general and administrative expenses and for other working capital requirements. We also expect that we will need to raise additional capital through a combination of equity offerings, debt financings, other third-party funding, marketing and distribution arrangements and other collaborations, strategic alliances and licensing arrangements. Additionally, the COVID-19 pandemic could have a continued adverse impact on economic and market conditions and extend the period of global economic slowdown, which would impair our ability to raise needed funds.

We may pursue various other dilutive and non-dilutive funding alternatives depending upon our clinical path forward and the extent to which we require additional capital to proceed with development of some or all of our product candidates on expected timelines. The source, timing and availability of any future financing will depend principally upon market conditions and the status of our clinical development programs, both of which may be negatively impacted by the COVID-19 pandemic. Funding may not be available when needed, at all, or on terms acceptable to us. Lack of necessary funds may require us to, among other things, delay, scale back or eliminate some or all of our research and product development programs, planned clinical trials, and capital expenditures or to license our potential products or technologies to third parties. We may alternatively engage in cost-cutting measures in an attempt to extend our cash resources as long as possible. If we are unable to raise additional capital, we may be forced to cease operations entirely.

Financing Transactions

In October 2020, we completed a registered public offering (the "October 2020 Offering") in which we sold an aggregate of (i) 11,785,000 shares of our common stock, (the "October 2020 Shares") and Series A warrants exercisable for an aggregate of 11,785,000 shares of our common stock (the "October 2020 Series A Warrants") at a combined public offering price of \$0.80 per share and associated warrant and (ii) pre-funded Series B warrants exercisable for an aggregate of 6,965,000 shares of common stock (the "October 2020 Series B Pre-funded Warrants") and Series A Warrants exercisable for an aggregate of 6,965,000 shares of our common stock (also the "October 2020 Series A Warrants") at a combined public offering price of \$0.80 per pre-funded warrant and associated warrant. Each October 2020 Series A Warrant has an exercise price of \$0.80 per share, is exercisable immediately and expires in October 2025. Each October 2020 Series B Pre-funded Warrant has an exercise price of \$0.00001 per share, is exercisable immediately, and expires when exercised in full, subject to certain conditions. In connection with the October 2020 Offering, we issued, to designees of H.C. Wainwright & Co., LLC ("Wainwright"), the placement agent for the October 2020 Offering, warrants (the "October 2020 Placement Agent Warrants") to purchase an aggregate of 1,218,750 shares of our common stock, which represents a number of shares of common stock equal to 6.5% of the aggregate number of shares of common stock and October 2020 Series B Pre-funded Warrants sold in the October 2020 Offering. The October 2020 Placement Agent Warrants have an exercise price of \$1.00 per share, are immediately exercisable and expire in October 2025. The net proceeds to us, after deducting Wainwright's placement agent fees and other offering expenses payable by us, were approximately \$13.5 million. There are no outstanding October 2020 Series B Pre-funded Warrants as of as of March 31, 2021. During the three months ended March 31, 2021, we issued an aggregate of 10,620,682 and 12,188 shares of common stock upon the exercise of certain of the October 2020 Series A Warrants and October 2020 Placement Agent Warrants, respectively, for aggregate proceeds of \$8.5 million.

In April 2020, we entered into a securities purchase agreement (the "April 2020 Purchase Agreement") with certain institutional investors (the "April 2020 Purchasers"), pursuant to which we agreed to sell and issue, in a registered direct offering, an aggregate of 1,715,240 shares of our common stock, at a purchase price per share of \$1.75 (the "April 2020 Shares"). The April 2020 Shares were offered by us pursuant to a shelf registration statement on Form S-3, which was declared effective by SEC on November 14, 2019 (File No. 333-234353) and a prospectus supplement thereunder. Pursuant to the April 2020 Purchase Agreement, in a concurrent private placement, we also issued to the April 2020 Purchasers warrants (the "April 2020 Series C Warrants") to purchase up to 1,715,240 shares of our common stock (the "Private Placement" and together with the April 2020 Registered Offering, the "April 2020 Offerings"). The April 2020 Series C Warrants are exercisable immediately at an exercise price of \$1.62 per share of common stock, subject to adjustment in certain circumstances, and expire on October 17, 2025. In connection with the April 2020 Offerings, we also issued to Wainwright warrants to purchase an aggregate of 111,491 shares of our common stock (the "April 2020 Placement Agent Warrants") which represents a number of shares of common stock equal to 6.5% of the aggregate number of April 2020 Shares sold in the April 2020 Registered Offering, at an exercise price of \$2.1875 per share with a term expiring on April 15, 2025. The net proceeds to us, after deducting Wainwright's placement agent fees and other offering expenses payable by us, were approximately \$2.6 million. We did not issue any shares as a result of April 2020 Series C Warrants exercise activity during the three months ended March 31, 2021.

In March 2020, we completed a registered public offering (the "March 2020 Offering") in which we sold an aggregate of (i) 955,613 shares of our common stock, (the "March 2020 Shares") and Series A Warrants exercisable for an aggregate of 955,613 shares of our common stock (the "March 2020 Series A Warrants") at a combined public offering price of \$2.75 per share and associated warrant and (ii) pre-funded Series B warrants exercisable for an aggregate of 1,589,842 shares of our common stock (the "March 2020 Series B Warrants") and Series A Warrants exercisable for an aggregate of 1,589,842 shares of our common stock (also the "March 2020 Series A Warrants") at a combined public offering price of \$2.75 per pre-funded warrant and associated warrant. Each March 2020 Series A Warrant has an exercise price of \$2.75 per share, is exercisable immediately and expires in March 2025. Each March 2020 Series B Warrant has an exercise price of \$0.00001 per share, is exercisable immediately, and expires when exercised in full, subject to certain conditions. In connection with the March 2020 Offering, we issued, to Wainwright, the placement agent for the March 2020 Offering, warrants (the "March 2020 Placement Agent Warrants") to purchase an aggregate of 165,455 shares of our common stock, which represents a number of shares of common stock equal to 6.5% of the aggregate number of shares of common stock and March 2020 Series B Warrants sold in the March 2020 Offering. The March 2020 Placement Agent Warrants have an exercise price of \$3.4375 per share, are immediately exercisable and expire in March 2025. The net proceeds to us, after deducting Wainwright's placement agent fees and other offering expenses payable by us, were approximately \$6.0 million. We did not issue any shares as a result of either the March 2020 Series A Warrant, March 2020 Series B Warrants or March 2020 Placement Agent Warrants during the three months ended March 31, 2021.

Cashflows

Net cash used in operating activities is comprised of our net losses, adjusted for non-cash expenses, and working capital requirements. Net cash used in operating activities for the three months ended March 31, 2021 was \$3.2 million compared to \$3.7 million for three months ended March 31, 2020. The \$0.5 million decrease in net cash used in operating activities for the three months ended March 31, 2021 as compared to the same period in the prior year was primarily due to a decrease in our net loss of \$0.2 million, a decrease in the change in accrued expenses and other liabilities of \$0.2 million and a decrease in the change in accounts payable of \$0.1 million.

The Company did not generate or use cash in investing activities during the three months ended March 31, 2021 and 2020.

Net cash generated by financing activities for the three months ended March 31, 2021, was \$8.5 million related to proceeds from the exercise of warrants. This compares to net cash used by financing activities of \$6.3 million consisting primarily of \$6.0 million in proceeds from the issuance of common stock associated with the March 2020 Offering and \$0.3 million in proceeds from the exercise of warrants.

Off-Balance Sheet Arrangements

We do not have any off-balance sheet arrangements that have or are reasonably likely to have a current or future material effect on our financial condition, changes in financial condition, revenues or expenses, results of operations, liquidity, capital expenditures, or capital resources.

Item 3. Quantitative and Qualitative Disclosures About Market Risk.

As a "smaller reporting company" as defined by Item 10 of Regulation S-K, we are not required to provide information required by this item.

Item 4. Controls and Procedures.

Evaluation of Disclosure Controls and Procedures

Our management, with the participation of our chief executive officer and chief financial officer, evaluated the effectiveness of our disclosure controls and procedures as of March 31, 2021. The term "disclosure controls and procedures," as defined in Rules 13a-15(e) and 15d-15(e) under the Exchange Act, means controls and other procedures

of a company that are designed to ensure that information required to be disclosed by a company in the reports that it files or submits under the Exchange Act is recorded, processed, summarized, and reported within the time periods specified in the rules and forms promulgated by the Securities and Exchange Commission. Disclosure controls and procedures include, without limitation, controls and procedures designed to ensure that information required to be disclosed by a company in the reports that it files or submits under the Exchange Act is accumulated and communicated to the company's management, including its principal executive and principal financial officers, as appropriate to allow timely decisions regarding required disclosure. Management recognizes that any controls and procedures, no matter how well designed and operated, can provide only reasonable assurance of achieving their objectives and management necessarily applies its judgment in evaluating the cost-benefit relationship of possible controls and procedures. Based on the evaluation of the Company's disclosure controls and procedures as of March 31, 2021, the Company's chief executive officer and chief financial officer concluded that, as of such date, the Company's disclosure controls and procedures were effective at the reasonable assurance level.

Changes in Internal Control over Financial Reporting

There have been no changes in our internal control over financial reporting that occurred during the quarter ended March 31, 2021 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

PART II—OTHER INFORMATION

Item 1A. Risk Factors.

Certain factors may have a material adverse effect on our business, financial condition, and results of operations. You should consider carefully the risks and uncertainties described below, in addition to other information contained in this Quarterly Report on Form 10-Q, including our consolidated financial statements and related notes. The risks and uncertainties described below are not the only ones we face. Additional risks and uncertainties that we are unaware of, or that we currently believe are not material, may also become important factors that adversely affect our business. If any of the following risks actually occurs, our business, financial condition, results of operations, and future prospects could be materially and adversely affected.

Risk Factors Summary

- The COVID-19 pandemic has delayed and may continue to delay our ability to complete our ongoing INSPIRE 2.0 clinical trial or may delay the initiation of future clinical trials, disrupt regulatory activities, or have other adverse effects on our business and operations. In addition, this pandemic has caused substantial disruption in the financial markets and may adversely impact economies worldwide, both of which could result in adverse effects on our business and operations.
- We have found it difficult and may continue to find it difficult to enroll patients in our clinical studies, which
 could delay or prevent clinical studies of our product candidates, and due to such enrollment delays, we may
 need to make a determination as to the next steps for our clinical program that could significantly impact our
 future operations and financial position.
- We will need additional funding before achieving potential profitability. If we are unable to raise capital
 when needed, we could be forced to delay, reduce, or eliminate our product development programs or
 commercialization efforts, engage in one or more potential transactions, or cease our operations entirely.
- We anticipate that we will continue to incur substantial losses for the foreseeable future and may never
 achieve or maintain profitability.
- We are wholly dependent on the success of one product candidate, the Neuro-Spinal Scaffold implant. Even if
 we are able to complete clinical development and obtain favorable clinical results, we may not be able to
 obtain regulatory approval for, or successfully commercialize, our Neuro-Spinal Scaffold implant.

- If we cannot protect, maintain and, if necessary, enforce our intellectual property rights, our ability to develop and commercialize products will be adversely impacted.
- We will depend upon strategic relationships to develop, exploit, and manufacture our products. If these
 relationships are not successful, we may not be able to capitalize on the market potential of these products.
- Our success depends on our ability to retain our management and other key personnel.
- We may face, and in the past have faced, lawsuits, which could divert management's attention and harm our business.
- The price of our common stock has been and may continue to be volatile, which could lead to losses by investors and costly securities litigation.

Risks Related to Our Business

The COVID-19 pandemic, which began in late 2019 and has had impacts worldwide, has delayed and may continue to delay our ability to complete our ongoing INSPIRE 2.0 clinical trial or delay the initiation of future clinical trials, disrupt regulatory activities, or have other adverse effects on our business and operations. In addition, this pandemic has caused substantial disruption in the financial markets and may adversely impact economies worldwide, both of which could result in adverse effects on our business and operations.

The COVID-19 pandemic, which began in December 2019, has had impacts worldwide, causing many governments to implement measures to slow the spread of the outbreak through quarantines, travel restrictions, heightened border scrutiny, and other measures. The outbreak and government measures taken in response, including widespread emergency orders requiring business and residents to curtail non-essential activities, have also had a significant impact, both direct and indirect, on businesses and commerce, as worker shortages have occurred; supply chains have been disrupted; facilities and production have been suspended; and demand for certain goods and services, such as medical services and supplies, has spiked, while demand for other goods and services, such as travel, has fallen. The future progression of the outbreak and its effects on our business and operations are uncertain. We and our clinical research organizations, as well as clinical trial sites, have faced disruptions related to the INSPIRE 2.0 clinical trial arising from suspension of activity at numerous clinical trial sites due to hospital staff shortages or state or city "stay at home" or "shelter in place" orders, delays in the ability to obtain necessary institutional review board, or IRB, or other necessary site approvals, as well as other delays at clinical trial sites. Specifically, we are aware that a significant number of our clinical sites had previously temporarily suspended enrollment into the INSPIRE 2.0 Study at their institution due to the coronavirus pandemic. As of May 7, 2021 we have 18 clinical sites open for enrollment, which is the total number of sites we have activated for the INSPIRE 2.0 Study. The full impact of the COVID-19 pandemic continues to evolve as of the date of filing this Quarterly Report on Form 10-Q and we cannot be certain what future impact the COVID-19 pandemic may have on our clinical sites and their respective abilities to enroll patients. As the pandemic continues to evolve, there may be additional government actions or disruptions that could cause our clinical sites to suspend or alter operations in a manner that would impact enrollment in the INSPIRE 2.0 Study. Additionally, the response to the COVID-19 pandemic may redirect resources of regulators in a way that would adversely impact our ability to progress regulatory approvals. In addition, we may face impediments to regulatory meetings and approvals due to measures intended to limit in-person interactions. Any of these factors could continue to adversely impact our ability to enroll, or delay enrollment in, the INSPIRE 2.0 clinical trial. Additionally, the pandemic has already caused significant disruptions in the financial markets, and may continue to cause such disruptions, which could impact our ability to raise additional funds through public offerings and may also impact the volatility of our stock price and trading in our stock. Moreover, it is possible the pandemic will significantly impact economies worldwide, which could result in adverse effects on our business and operations. We cannot be certain what the overall impact of the COVID-19 pandemic will be on our business and it has the potential to adversely affect our business, financial condition, results of operations, and prospects.

We have found it difficult and may continue to find it difficult to enroll patients in our clinical studies, which could delay or prevent clinical studies of our product candidates, and due to such enrollment delays, we may need to make a determination as to the next steps for our clinical program that could significantly impact our future operations and financial position. Specifically, if the pace of enrollment in our INSPIRE 2.0 Study does not increase, we may need to make a determination as to the next steps for the INSPIRE 2.0 Study and our clinical program.

Patient enrollment is affected by a number of factors including:

- widespread emergency orders in response to the COVID-19 pandemic requiring business and residents to curtail non-essential activities;
- severity of the disease, injury, or condition under investigation;
- design of the study protocol;
- size and nature of the patient population;
- eligibility criteria for and design of the study in question;
- perceived risks and benefits of the product candidate under study;
- proximity and availability of clinical study sites for prospective patients;
- availability of competing therapies and clinical studies;
- efforts to facilitate timely enrollment in clinical studies;
- patient referral practices of physicians; and
- ability to monitor patients adequately during and after treatment.

For a period in 2016, as a result of an FDA pre-specified enrollment hold, we were unable to enroll patients in The INSPIRE Study pending FDA authorization to proceed with additional enrollment, which delayed our ability to open new sites and enroll patients at the pace we had anticipated. In addition, in July 2017 we halted enrollment in the study, and subsequently closed enrollment in the study. We also experienced enrollment delays with our INSPIRE 2.0 Study as a result of the COVID-19 pandemic when a significant number of our clinical sites temporarily suspended enrollment into the INSPIRE 2.0 Study at their institution in 2020. As such, the COVID-19 pandemic affected and may continue to affect the potential for enrollment in our INSPIRE 2.0 Study in the event that our clinical sites may again suspend studies in the future in order to manage the pandemic. We may not be able to initiate or continue clinical studies if we cannot enroll a sufficient number of eligible patients to participate in the clinical studies required by regulatory agencies, and as a result, if the pace of enrollment does not increase, we may need to make a determination as to the next steps for the INSPIRE 2.0 Study and our clinical program.

If we have difficulty enrolling a sufficient number of patients to conduct our clinical studies as planned, we may need to delay, limit, or terminate ongoing or planned clinical studies, any of which would have an adverse effect on our business. We also may consider changes to our current business strategy and future operations. We are reviewing alternatives with a goal of maximizing the value of our company. We could determine to engage in one or more potential transactions, such as the sale of our company, a strategic partnership with one or more parties or the licensing, sale or divestiture of some of our assets or proprietary technologies, or to continue to operate our business in accordance with our existing business strategy.

We have experienced delays and may experience further delays in our clinical development of our Neuro-Spinal Scaffold implant. Clinical trials for future product candidates may also experience delays or may not be able to commence.

Before we can obtain regulatory approval for the sale of our *Neuro-Spinal Scaffold* implant, we must complete the clinical studies that are required. In July 2017, The INSPIRE Study of our *Neuro-Spinal Scaffold* implant was placed on hold following the third patient death in the trial. We subsequently closed enrollment in The INSPIRE Study and will follow the active patients until completion. The FDA has approved the INSPIRE 2.0 Study. However, the INSPIRE 2.0 Study may not be successfully completed or may take longer than anticipated because of any number of factors, including potential delays in the enrollment of subjects in the study, including delays due to the COVID-19 pandemic, the availability of scaffold implants to supply to our clinical sites, failure to demonstrate safety and probable benefit of our *Neuro-Spinal Scaffold* implant, lack of adequate funding to continue the clinical trial, or unforeseen safety issues. For example, enrollment in our INSPIRE 2.0 Study has been slower than we initially anticipated. Enrolling patients the INSPIRE 2.0 Study and any other clinical trial of our *Neuro-Spinal Scaffold* implant will continue to require the approval of the institutional review boards, or IRBs at each clinical site.

In addition, our results may subsequently fail to meet the safety and probable benefit standards required to obtain regulatory approvals. For example, in The INSPIRE Study, 2 of the 16 evaluable patients were initially assessed to have improved from complete AIS A SCI to incomplete AIS B SCI, but each was later assessed to have reverted to complete AIS A SCI prior to the patient's 6-month examination. Of these 2 patients, 1 patient had converted back to AIS B and the other remained at AIS A at the 6-month examination. There is known and published variability in some of the measures used to assess AIS improvement and these measures can vary over time or depending upon the examiner. While we implemented procedures in The INSPIRE Study and the INSPIRE 2.0 Study, and will also implement procedures in any future clinical study to limit such variations, we cannot be certain that regulatory authorities will accept the results of our clinical trials or interpret them the way that we do.

In addition, clinical trials can be delayed or aborted for a variety of reasons, including delay or failure to:

- obtain regulatory approval to commence future clinical trials;
- reach agreement on acceptable terms with prospective contract research organizations, or CROs, and clinical
 trial sites, the terms of which can be subject to extensive negotiation and may vary significantly among
 different CROs and trial sites;
- obtain IRB approval at each site;
- recruit, enroll, and retain patients through the completion of clinical trials;
- maintain clinical sites in compliance with trial protocols through the completion of clinical trials;
- address patient safety concerns that arise during the course of the trial;
- initiate or add a sufficient number of clinical trial sites; or
- manufacture sufficient quantities of our product candidate for use in clinical trials.

We could encounter delays if a clinical trial is suspended or terminated by us, by the relevant IRB at the sites at which such trials are being conducted, by the Data Safety Monitoring Board for such trial, or by the FDA or other regulatory authorities. Such authorities may suspend or terminate a clinical trial due to a number of factors, including

failure to conduct the clinical trial in accordance with regulatory requirements or our clinical protocols, a problematic inspection of the clinical trial operations or trial site by the FDA or other regulatory authorities resulting in the imposition of a clinical hold, unforeseen safety issues or adverse events, or changes in laws or regulations. In addition, regulatory agencies may require an audit with respect to the conduct of a clinical trial, which could cause further delays or increase costs. For example, in December 2017, we and several of our clinical sites and our CRO were subject to an FDA inspection in association with The INSPIRE Study. At the close of the inspection at the Company, the FDA issued a Form 483 with 2 observations relating to our oversight of clinical trial sites in The INSPIRE Study. We sought input from the FDA regarding the scope and timing of our proposed remediation efforts and the FDA has indicated that our corrective actions appear adequate. We cannot be certain that we will not be subject to additional regulatory action by the FDA. Our remediation efforts have added, and may continue to add, costs to our clinical development plans. Any delays in completing our clinical trials will increase our costs, slow down our product candidate development and regulatory review process, and jeopardize our ability to obtain approval and commence product sales and generate revenues. Any of these occurrences may harm our business, financial condition, and prospects significantly.

Risks Related to Our Financial Position and Need for Additional Capital

We will need additional funding before achieving potential profitability. If we are unable to raise capital when needed, we could be forced to delay, reduce, or eliminate our product development programs or commercialization efforts, engage in one or more potential transactions, or cease our operations entirely.

We believe we have sufficient cash resources to continue our business operations, through the second quarter of 2023. We expect that our expenses will increase in connection with our ongoing activities, particularly as we conduct our INSPIRE 2.0 Study, and as we seek regulatory approval for our Neuro-Spinal Scaffold implant. If we obtain regulatory approval for any of our current or future product candidates, we expect to incur significant commercialization expenses related to manufacturing, marketing, sales, and distribution. Accordingly, we will need to obtain additional funding in connection with our continuing operations.

If we are unable to raise additional capital, we may seek to engage in one or more potential transactions, such as the sale of our company, a strategic partnership with one or more parties or the licensing, sale or divestiture of some of our assets or proprietary technologies, or we may be forced to cease our operation entirely. There can be no assurance that we will be able to enter into such a transaction or transactions on a timely basis or on terms that are favorable to us. If we are unable to raise capital when needed or on attractive terms, or should we engage in one or more potential strategic transactions, we could be forced to delay, reduce, or eliminate our research and development programs or any future commercialization efforts or to cease operations entirely. If we determine to change our business strategy or to seek to engage in a strategic transaction, our future business, prospects, financial position and operating results could be significantly different than those in historical periods or projected by our management. Because of the significant uncertainty regarding these events, we are not able to accurately predict the impact of any potential changes in our existing business strategy.

Our future funding requirements, both near and long term, will depend on many factors, including, but not limited

to:

- the scope, progress, results, and costs of preclinical development, laboratory testing, and clinical trials for our Neuro-Spinal Scaffold implant and any other product candidates that we may develop or acquire, including our INSPIRE 2.0 Study;
- future clinical trial results of our Neuro-Spinal Scaffold implant;
- the timing of, and the costs involved in, obtaining regulatory approvals for the Neuro-Spinal Scaffold
 implant, and the outcome of regulatory review of the Neuro-Spinal Scaffold implant;
- the cost and timing of future commercialization activities for our products if any of our product candidates are approved for marketing, including product manufacturing, marketing, sales, and distribution costs;
- the revenue, if any, received from commercial sales of our product candidates for which we receive marketing approval;

- the cost of having our product candidates manufactured for clinical trials in preparation for regulatory approval and in preparation for commercialization;
- the cost and delays in product development as a result of any changes in regulatory oversight applicable to our product candidates;
- our ability to establish and maintain strategic collaborations, licensing, or other arrangements and the financial terms of such agreements;
- the cost and timing of establishing sales, marketing, and distribution capabilities;
- the costs involved in preparing, filing, prosecuting, maintaining, defending, and enforcing our intellectual property portfolio;
- the efforts and activities of competitors and potential competitors;
- the effect of competing technological and market developments; and
- the extent to which we acquire or invest in businesses, products, and technologies.

Identifying potential product candidates and conducting preclinical testing and clinical trials is a time-consuming, expensive, and uncertain process that takes years to complete, and we may never generate the necessary data or results required to obtain regulatory approval and achieve product sales. In addition, our product candidates, if approved, may not achieve commercial success. Our commercial revenues, if any, will be derived from sales of products that we do not expect to be commercially available for several years, if at all. Accordingly, we will need to continue to rely on additional financing to achieve our business objectives. Adequate additional financing may not be available to us on acceptable terms, or at all.

We have a limited operating history and have incurred significant losses since our inception.

We have incurred net losses each year since our inception, including net losses of \$2.2 million for the three months ended March 31, 2021, and net losses of \$9.1 million for the year ended December 31, 2020 and \$11.8 million for the year ended December 31, 2019. As of March 31, 2021, we had an accumulated deficit of \$230.5 million. We have a limited operating history on which to base an evaluation of our business and investors should consider the risks and difficulties frequently encountered by early-stage companies in new and rapidly evolving markets, particularly companies engaged in the development of medical devices. To date, we have not commercialized any products or generated any revenues from the sale of products, and we do not expect to generate any product revenues in the foreseeable future. We do not know whether or when we will generate revenue or become profitable. Moreover, we may allocate significant amounts of capital towards products and technologies for which market demand is lower than anticipated and, as a result, may not achieve expectations or may elect to abandon such efforts.

We have devoted most of our financial resources to research and development, including our clinical and preclinical development activities related to our *Neuro-Spinal Scaffold* implant. Overall, we expect our research and development expenses to be substantial and to increase for the foreseeable future as we continue the development and clinical investigation of our current and future products. We expect that it could be several years, if ever, before we have a product candidate ready for commercialization. Even if we obtain regulatory approval to market our *Neuro-Spinal Scaffold* implant or other products, our future revenues will depend upon the size of any markets in which our products have received approval, our ability to achieve sufficient market acceptance, reimbursement from third-party payers, and other factors.

We anticipate that we will continue to incur substantial losses for the foreseeable future and may never achieve or maintain profitability.

We expect to continue to incur significant expenses and increasing net losses for at least the next several years. We expect our expenses will increase substantially in connection with our ongoing activities, as we:

continue clinical development of our *Neuro-Spinal Scaffold* implant;

- initiate or restart the research and development of other product candidates;
- have our product candidates manufactured for clinical trials and for commercial sale;
- establish a sales, marketing, and distribution infrastructure to commercialize any products for which we may obtain marketing approval;
- maintain, protect, and expand our intellectual property portfolio; and
- continue our research and development efforts for new product opportunities.

To become and remain profitable, we must succeed in developing and commercializing our product candidates with significant market potential. This will require us to be successful in a range of challenging activities, including completing preclinical testing and clinical trials of our current and future product candidates, developing additional product candidates, obtaining regulatory approval for these product candidates, and manufacturing, marketing, and selling any products for which we may obtain regulatory approval. We are only in the initial stages of most of these activities. We may never succeed in these activities and, even if we do, may never generate revenues that are significant enough to achieve profitability.

Even if we do achieve profitability, we may not be able to sustain or increase profitability on a quarterly or annual basis. Our failure to become and remain profitable could depress the value of our company and could impair our ability to raise capital, expand our business, maintain our research and development efforts, diversify our product offerings, or even continue our operations. A decline in the value of our company could cause an investor to lose all or part of their investment.

Raising additional capital may cause dilution to our existing stockholders, restrict our operations, or require us to relinquish rights to our product candidates on unfavorable terms to us.

Until such time, if ever, as we can generate substantial product revenues, we expect to finance our cash needs through a combination of equity offerings, debt financings, and other third party funding alternatives including license and collaboration agreements. To raise additional capital or pursue strategic transactions, we may in the future sell additional shares of our common stock, par value \$0.00001 per share (the "common stock"), or other securities convertible into or exchangeable for our common stock, which will dilute the ownership interest of our current stockholders, and the terms of these securities may include liquidation or other preferences that adversely affect the rights of our current stockholders. If we raise additional funds through collaborations, strategic alliances, or marketing, distribution, or licensing arrangements with third parties, we may have to relinquish valuable rights to our product candidates, future revenue streams or research programs, or grant licenses on terms that may not be favorable to us or that may reduce the value of our common stock. If we are unable to raise additional funds when needed, we may be required to delay, limit, reduce, or terminate our product development or commercialization efforts for our *Neuro-Spinal Scaffold* implant or any other product candidates that we develop or acquire or to cease operations entirely.

Changes in tax laws or in their implementation or interpretation may adversely affect our business and financial condition.

As part of Congress' response to the COVID-19 pandemic, the Families First Coronavirus Response Act, or FFCR Act, was enacted on March 18, 2020, and the Coronavirus Aid, Relief, and Economic Security Act, or CARES Act, was enacted on March 27, 2020. Both contain numerous tax provisions. In particular, the CARES Act retroactively and temporarily (for taxable years beginning before January 1, 2021) suspends application of the 80%-of-income limitation on the use of net operating losses, or NOLs, which was enacted as part of the Tax Act. It also provides that NOLs arising in any taxable year beginning after December 31, 2017 and before January 1, 2021 are generally eligible to be carried back up to five years. The CARES Act also temporarily (for taxable years beginning in 2019 or 2020) relaxes the limitation of the tax deductibility for net interest expense by increasing the limitation from 30% to 50% of adjusted taxable income. The Company has evaluated the impact of the CARES Act and determined it to have an immaterial effect on the Company's tax position.

Regulatory guidance under the Tax Act, the FFCR Act and the CARES Act is and continues to be forthcoming, and such guidance could ultimately increase or lessen impact of these laws on our business and financial condition. Congress is also considering and may enact further tax law changes in connection with the COVID-19 pandemic, some of which could have an impact on our company. In addition, state tax legislation or administration guidance conforming to or decoupling from particular provisions of the Tax Act, the FFCR Act and the CARES Act could affect our business or financial condition.

Our ability to use our net operating loss carryforwards and tax credit carryforwards may be limited.

We have generated significant NOLs and research and development tax credits, or R&D credits, as a result of our incurrence of losses and our conduct of research activities since inception. We generally are able to carry NOLs and R&D credits forward to reduce our tax liability in future years but certain NOL carryforwards could expire unused and be unavailable to offset our future income tax liabilities. As described above in "Changes in tax laws or in their implementation or interpretation may adversely affect our business and financial condition," the Tax Act, as amended by the CARES Act, includes changes to U.S. federal tax rates and the rules governing NOLs that may significantly impact our ability to utilize our NOLs to offset taxable income in the future. Nor is it clear how various states will respond to the Tax Act, the FFCR Act or the CARES Act. In addition, state NOLs generated in one state cannot be used to offset income generated in another state. For these reasons, even if we attain profitability, we may be unable to use a material portion of our NOLs and other tax attributes.

In addition, our ability to utilize the NOLs and R&D credits is subject to the rules of Sections 382 and 383, respectively, of the Code. Those sections generally restrict the use of NOLs and R&D credits after an "ownership change." An ownership change occurs if, among other things, the stockholders (or specified groups of stockholders) who own or have owned, directly or indirectly, 5% or more of a corporation's common stock or are otherwise treated as 5% stockholders under Section 382 of the Code and the United States Treasury Department regulations promulgated thereunder increase their aggregate percentage ownership of that corporation's stock by more than 50 percentage points over the lowest percentage of the stock owned by these stockholders over the applicable testing period. In the event of an ownership change, Section 382 imposes an annual limitation on the amount of taxable income a corporation may offset with NOL carryforwards and Section 383 imposes an annual limitation on the amount of tax a corporation may offset with business credit (including the R&D credit) carryforwards. Any unused annual limitation may be carried over to later years until the applicable expiration date for the respective NOL or R&D credit carryforwards. We have completed several financings since our inception, which may have resulted in an ownership change as defined by Sections 382 and 383 of the Code, or could result in an ownership change in the future, but we have not completed an analysis of whether a limitation as noted above exists. As of March 31, 2021, we have not performed a Section 382 study yet, but we will complete an appropriate analysis before our tax attributes are utilized.

Increases in authorized shares may be required for future financings or other strategic transactions. We have previously experienced difficulties obtaining quorum for our annual meetings and achieving the number of votes required for increases in authorized shares.

We may seek the additional capital necessary to fund our operations through public or private equity offerings, debt financings, and collaborative and licensing arrangements. We have limited capital and in order for us to execute on our business plan and remain viable as a going concern, we must have the flexibility to engage in capital raising transactions until we are able to generate sufficient revenue and cash flow. Investors in prior transactions have purchased our common stock or our derivative securities, such as warrants, for which we must reserve unissued common stock. We therefore may need to increase the number of authorized shares of common stock that will enable us to issue common stock or securities convertible or exercisable into common stock to investors and other strategic partners, and as a result enable us to engage in capital raising transactions and other strategic transactions involving the issuance of equity securities.

Such increases to our authorized common stock require shareholder approval. Our 2019 Annual Meeting was initially postponed due to a lack of quorum, and we were able to successfully achieve quorum and the votes required to pass the proposal to increase the number of authorized shares only after announcing a new record date for the meeting, which was held in January 2020. Our 2020 Annual Meeting was held in August 2020, and we were able to achieve quorum and obtain the number of necessary votes to approve an increase in our authorized common stock, without having to postpone the meeting. Although we were able to achieve quorum and obtain the number of necessary votes for

an increase in authorized common stock at our 2019 Annual Meeting and our 2020 Annual Meeting, we cannot guarantee that we will not experience future difficulties in obtaining quorum for our annual meetings or difficulties in obtaining the necessary votes required to pass proposals such as increases in authorized shares. In such events, we will be limited in our efforts to raise additional capital, and our operations, financial condition and our ability to continue as a going concern may be materially and adversely affected.

Acquisitions of companies, businesses, or technologies may substantially dilute our stockholders and increase our operating losses.

We continue to actively evaluate business partnerships and acquisitions of businesses, technologies, or intellectual property rights that we believe would be necessary, useful, or complementary to our current business. Any such acquisition may require assimilation of the operations, products or product candidates, and personnel of the acquired business and the training and integration of its employees, and could substantially increase our operating costs, without any offsetting increase in revenue. We may also acquire the right to use certain intellectual property through licensing agreements, which could substantially increase our operating costs. Acquisitions and licensing agreements may not provide the intended technological, scientific or business benefits and could disrupt our operations and divert our limited resources and management's attention from our current operations, which could harm our existing product development efforts. While we may use cash or equity to finance a future acquisition or licensing agreement, it is likely we would issue equity securities as a significant portion or all of the consideration in any acquisition. The issuance of equity securities for an acquisition could be substantially dilutive to our stockholders. Any investment made in, or funds advanced to, a potential acquisition target could also significantly, adversely affect our results of operations and could further reduce our limited capital resources. Any acquisition or action taken in anticipation of a potential acquisition or other change in business activities could substantially depress the price of our stock. In addition, our results of operations may suffer because of acquisition related costs, or the post-acquisition costs of funding the development of an acquired technology or product candidates or operations of the acquired business, or due to amortization or impairment costs for acquired goodwill and other intangible

Risks Related to the Development, Regulatory Approval, and Commercialization of Our Product Candidates

We are wholly dependent on the success of 1 product candidate, the Neuro-Spinal Scaffold implant. Even if we are able to complete clinical development and obtain favorable clinical results, we may not be able to obtain regulatory approval for, or successfully commercialize, our Neuro-Spinal Scaffold implant.

We currently have only 1 product candidate, the Neuro-Spinal Scaffold implant, in clinical development, and our business depends almost entirely on the successful clinical development, regulatory approval, and commercialization of that product candidate, which may never occur. We currently have no products available for sale, generate no revenues from sales of any products, and we may never be able to develop marketable products. Our Neuro-Spinal Scaffold implant will require substantial additional clinical development, testing, manufacturing process development, and regulatory approval before we are permitted to commence its commercialization. Before obtaining regulatory approval via the HDE pathway for the commercial sale of any product candidate, we must demonstrate through extensive preclinical testing and clinical trials that the product candidate does not pose an unreasonable or significant risk of illness or injury, and that the probable benefit to health outweighs the risk of injury or illness from its use, taking into account the probable risks and benefits of currently available devices or alternative forms of treatment. Alternatively, if we were to seek premarket approval, or PMA, for our product candidate, that would require demonstration that the product is safe and effective for use in each target indication. This process can take many years. Of the large number of medical devices in development in the United States, only a small percentage successfully complete the regulatory approval process required by the FDA and are commercialized. Accordingly, even if we are able to obtain the requisite capital to continue to fund our development and clinical programs, we may be unable to successfully develop or commercialize our Neuro-Spinal Scaffold implant or any other product candidate.

The clinical trials of any of our current or future product candidates are, and the manufacturing and marketing of any such product candidates will be, subject to extensive and rigorous review and regulation by the FDA and other government authorities in the United States and in other countries where we intend to test and, if approved, market such product candidates.

Clinical trials involve a lengthy and expensive process with an uncertain outcome, and results of earlier nonclinical studies and clinical trials may not be predictive of future trial results.

The results of preclinical studies and early clinical trials of new medical devices do not necessarily predict the results of later-stage clinical trials. The design of our clinical trials is based on many assumptions about the expected effects of our product candidates, and if those assumptions are incorrect, the trials may not produce results to support regulatory approval. We are currently pursuing marketing approval via the HDE regulatory pathway which requires us to show the device does not pose an unreasonable or significant risk of illness or injury, and that the probable benefit of health outweighs the risk of injury or illness from its use. Preliminary results may not be confirmed upon full analysis of the detailed results of an early clinical trial. Product candidates in later stages of clinical development may fail to show safety and probable benefit sufficient to support intended use claims despite having progressed through initial clinical testing. The data collected from clinical trials of our product candidates may not be sufficient to obtain regulatory approval in the United States or elsewhere. It is also possible that patients enrolled in clinical trials will experience adverse events or unpleasant side effects that are not currently part of the product candidate's profile. Because of the uncertainties associated with clinical development and regulatory approval, we cannot determine if or when we will have an approved product ready for commercialization or achieve sales or profits.

We must obtain FDA approval before we can sell any of our products in the United States and approval of similar regulatory authorities in countries outside the United States before we can sell our products in such countries. We may incur additional costs or experience delays in completing, or ultimately be unable to complete, the development and commercialization of our products if such approval is denied or delayed.

The development, manufacture, and marketing of our products are subject to government regulation in the United States and other countries. In the United States and most foreign countries, we must complete rigorous preclinical testing and extensive human clinical trials that demonstrate the safety and efficacy of a product in order to apply for regulatory approval to market the product. If the FDA grants regulatory approval of a product, the approval may be limited to specific indications or limited with respect to its distribution. Expanded or additional indications for approved devices may not be approved, which could limit our potential revenues. Foreign regulatory authorities may apply similar or additional limitations or may refuse to grant any approval. Consequently, even if we believe that preclinical and clinical data are sufficient to support regulatory approval for our products, the FDA and foreign regulatory authorities may not ultimately grant approval for commercial sale in any jurisdiction. If our product candidates are not approved, our ability to generate revenues will be limited and our business will be adversely affected.

We are currently pursuing an HDE regulatory pathway in the United States for our *Neuro-Spinal Scaffold* implant. The HDE requires that there is no other comparable device available to provide therapy for a condition and requires sufficient information for the FDA to determine that the device does not pose an unreasonable or significant risk of illness or injury, and that the probable benefit to health outweighs the risk of injury or illness from its use. The amended protocol for The INSPIRE Study, which was approved in February 2016, established an OPC, which is a measure of study success used in clinical studies designed to demonstrate safety and probable benefit in support of an HDE approval. The OPC for The INSPIRE Study is currently defined as 25% or more of the patients in the study demonstrating an improvement of at least 1 AIS grade by 6 months post-implantation. While we expect The INSPIRE Study to serve as 1 source of data used to support HDE approval in the future, we will not complete full enrollment of that study. In addition, although The INSPIRE Study is structured with the OPC as the primary component for demonstrating probable benefit, the OPC is not the only variable that the FDA would evaluate when reviewing a future HDE application.

The FDA had previously recommended that we include a randomized, concurrent control arm in the study and we have proposed and received approval for the INSPIRE 2.0 Study. The primary endpoint is defined as the proportion of patients achieving an improvement of at least 1 AIS grade at 6 months post-implantation. The definition of study success is that the difference in the proportion of subjects who demonstrate an improvement of at least 1 grade on AIS assessment at the 6-month primary endpoint follow-up visit between the Scaffold Arm and the Comparator Arm must be equal to or greater than 20%. While our INSPIRE 2.0 Study is structured with a definition of study success requiring a minimum difference between groups in the percentage of subjects achieving improvement, that success definition is not the only factor that the FDA would evaluate in the future HDE application. Moreover, there can be no assurance that the INSPIRE 2.0 Study will be successfully completed.

Approval is not guaranteed if the OPC is met for The INSPIRE Study or the definition of study success is met for the INSPIRE 2.0 Study, and even if the OPC or definition of study success are not met, the FDA may approve a medical device if probable benefit is supported by a comprehensive review of all clinical endpoints and preclinical results, as demonstrated by the sponsor's body of evidence.

In addition, as 1 source of comparator data, we completed the CONTEMPO Registry Study, utilizing existing databases and registries to develop a historical comparator that, to the extent possible, matches patients to those patients enrolled in The INSPIRE Study. Analysis of data from the CONTEMPO Registry Study may suggest a higher threshold for evidencing probable benefit. For example, ASIA Impairment Scale (AIS) conversion rates at approximately 6 months postinjury across the three registries used in CONTEMPO varied from 16.7% - 23.4%, which are higher than the approximately 15.5% conversion rate from the historical registries that were the basis for the selection of the current OPC for The INSPIRE Study.

Even if we successfully complete the INSPIRE 2.0 Study, we cannot be certain that the FDA will agree that this study, together with the CONTEMPO Registry Study, provides sufficient information for the FDA to determine that the device does not pose an unreasonable or significant risk of illness or injury, and that the probable benefit to health outweighs the risk of injury or illness from its use.

In the event our clinical data is not acceptable to the FDA, our ability to obtain approval under the HDE pathway may be delayed or may not be feasible. If the FDA does not approve our product candidates in a timely fashion, or at all, our business and financial condition will be adversely affected.

The 21st Century Cures Act increased the upper population limit for an HDE from 4,000 to 8,000, which allows us to potentially request an expansion of our current Humanitarian Use Device, or HUD to include additional patient populations beyond our current HUD for complete SCI. If we choose to pursue such an expansion, this may cause our application to be delayed or cause the FDA to request additional information. In addition, our current study is not designed to support approval beyond complete SCI. Thus, expansion would require additional studies. We cannot be certain that we will be able to increase the potential population that we might be able to treat based on the HDE pathway. If any of these events occur, our business and financial condition will be adversely affected.

There are risks associated with pursuing FDA approval via an HDE pathway, including the possibility that the approval could be withdrawn in the future if the FDA subsequently approves another device for the same intended use, as well as limitations on the ability to profit from sales of the product.

If the FDA subsequently approves a PMA or clears a 510(k) for the HUD or another comparable device with the same indication, the FDA may withdraw the HDE. Once a comparable device becomes legally marketed through PMA or 510(k) clearance to treat or diagnose the disease or condition in question, there may no longer be a need for the HUD and so the HUD may no longer meet the requirements of section 520(m)(2)(B) of the Food Drug & Cosmetic Act, or the FDCA.

Except in certain circumstances, products approved under an HDE cannot be sold for an amount that exceeds the costs of research and development, fabrication, and distribution of the device (i.e., for profit). Currently, under section 520(m)(6)(A)(i) of the FDCA, as amended by the Food and Drug Administration Safety and Innovation Act, a HUD is only eligible to be sold for profit after receiving HDE approval if the device (1) is intended for the treatment or diagnosis of a disease or condition that occurs in pediatric patients or in a pediatric subpopulation, and such device is labeled for use in pediatric patients or in a pediatric subpopulation in which the disease or condition occurs; or (2) is intended for the treatment or diagnosis of a disease or condition that does not occur in pediatric patients or that occurs in pediatric patients in such numbers that the development of the device for such patients is impossible, highly impracticable, or unsafe. If an HDE-approved device does not meet either of the eligibility criteria, the device cannot be sold for profit. With enactment of the FDA Reauthorization Act of 2017, Congress provided that the exemption for HUD / HDE profitability is available as long as the request for an exemption is submitted before October 1, 2022.

Some of our future products may be viewed by the FDA as combination products and the review of combination products is often more complex and more time consuming than the review of other types of products.

Our future products may be regulated by the FDA as combination products. For a combination product, the FDA must determine which center or centers within the FDA will review the product candidate and under what legal authority the product candidate will be reviewed. The process of obtaining FDA marketing clearance or approval is lengthy, expensive, and uncertain, and we cannot be sure that any of our combination products, or any other products, will be cleared or approved in a timely fashion, or at all. In addition, the review of combination products is often more complex and more time consuming than the review of a product candidate under the jurisdiction of only 1 center within the FDA. We cannot be sure that the FDA will not select to have our combination products reviewed and regulated by only 1 FDA center and/or different legal authority, in which case the path to regulatory approval would be different and could be lengthier and more costly. If the FDA does not approve or clear our products in a timely fashion, or at all, our business and financial condition will be adversely affected.

We may face substantial competition, which may result in others discovering, developing, or commercializing products before or more successfully than we do.

In general, the biotechnology industry is subject to intense competition and rapid and significant technological change. We have many potential competitors, including major drug companies, specialized biotechnology firms, academic institutions, government agencies, and private and public research institutions. Many of these competitors have significantly greater financial and technical resources than us, and superior experience and expertise in research and development, preclinical testing, design and implementation of clinical trials, regulatory processes and approval for products, production and manufacturing, and sales and marketing of approved products. Large and established companies compete in the biotechnology market. In particular, these companies have greater experience and expertise in securing government contracts and grants to support their research and development efforts, conducting testing and clinical trials, obtaining regulatory approvals to market products, manufacturing such products on a broad scale, and marketing approved products. Smaller or early-stage companies and research institutions may also prove to be significant competitors, particularly if they have collaborative arrangements with larger and more established biotechnology companies. We will also face competition from these parties in recruiting and retaining qualified scientific and management personnel, establishing clinical trial sites, and registering subjects for clinical trials.

In order to effectively compete, we will have to make substantial investments in development, clinical testing, manufacturing, and sales and marketing, or partner with 1 or more established companies. There is no assurance that we will be successful in having our products approved or gaining significant market share for any of our products. Our technologies and products also may be rendered obsolete or noncompetitive as a result of products introduced by our competitors.

The results of our clinical trials may not support our product candidate claims or may result in the discovery of adverse side effects.

Our ongoing research and development, preclinical testing, and clinical trial activities are subject to extensive regulation and review by numerous governmental authorities both in the United States and abroad. Clinical studies must be conducted in compliance with FDA regulations or the FDA may take enforcement action. The data collected from these clinical studies may ultimately be used to support market clearance for these products. Even if our clinical trials are completed as planned, we cannot be certain that their results will support our product candidate claims or that the FDA will agree with our conclusions regarding them. Success in preclinical studies and early clinical trials does not ensure that later clinical trials will be successful, and we cannot be sure that the later trials will replicate the results of prior trials and preclinical studies. The clinical trial process may fail to demonstrate that our product candidates are safe and effective for the proposed indicated uses, which could cause us to abandon a product candidate and may delay development of others. Any delay or termination of our clinical trials will delay the filing of our product submissions and, ultimately, our ability to commercialize our product candidates and generate revenues. It is also possible that patients enrolled in clinical trials will experience adverse side effects that are not currently part of the product candidate's profile.

If approved, our products will require market acceptance to be successful. Failure to gain market acceptance would impact our revenues and may materially impair our ability to continue our business.

Even if we receive regulatory approvals for the commercial sale of our product candidates, the commercial success of our products will depend on, among other things, their acceptance by physicians, patients, third-party payers such as health insurance companies, and other members of the medical community as a therapeutic and cost-effective alternative to competing products and treatments. Physicians and hospitals will need to establish training and procedures to utilize and implement our *Neuro-Spinal Scaffold* implant, and there can be no assurance that these parties will adopt the use of our device or develop sufficient training and procedures to properly utilize it. Market acceptance of, and demand for, any product that we may develop and commercialize will depend on many factors, both within and outside of our control. Payers may view new products or products that have only recently been launched or with limited clinical data available, as investigational, unproven, or experimental, and on that basis may deny coverage of procedures involving use of our products. If our product candidates fail to gain market acceptance, we may be unable to earn sufficient revenue to continue our business.

If we or our suppliers fail to comply with FDA regulatory requirements, or if we experience unanticipated problems with any approved products, these products could be subject to restrictions or withdrawal from the market.

Any product for which we obtain regulatory approval, and the manufacturing processes, reporting requirements, post-approval clinical data, and promotional activities for such product, will be subject to continued regulatory review and oversight by the FDA. In particular, we and our third-party suppliers will be required to comply with the FDA's Quality System Regulations, or QSRs. These FDA regulations cover the methods and documentation of the design, testing, production, control, quality assurance, labeling, packaging, sterilization, storage, and shipping of products. Compliance with applicable regulatory requirements is subject to continual review and is monitored rigorously through periodic inspections by the FDA. If we, or our manufacturers, fail to adhere to QSR requirements, this could delay production of our product candidates and lead to fines, difficulties in obtaining regulatory clearances, recalls, enforcement actions, including injunctive relief or consent decrees, or other consequences, which could, in turn, have a material adverse effect on our financial condition and results of operations.

In addition, we and our suppliers are required to comply with Good Manufacturing Practices and Good Tissue Practices with respect to any human cells and biologic products we may develop, and International Standards Organization regulations for the manufacture of our products, and other regulations which cover the methods and documentation of the design, testing, production, control, quality assurance, labeling, packaging, storage, and shipping of any product for which we obtain clearance or approval. Manufacturing may also be subject to controls by the FDA for parts of the combination products that the FDA may find are controlled by the biologics regulations.

The FDA audits compliance with the QSR and other similar regulatory requirements through periodic announced and unannounced inspections of manufacturing and other facilities. The failure by us or 1 of our suppliers to comply with applicable statutes and regulations administered by the FDA, or the failure to timely and adequately respond to any adverse inspectional observations or product safety issues, could result in any of the following enforcement actions:

- untitled letters, warning letters, fines, injunctions, consent decrees, and civil penalties;
- unanticipated expenditures to address or defend such actions;
- customer notifications or repair, replacement, refunds, recall, detention, or seizure of our products;
- operating restrictions or partial suspension or total shutdown of production;
- refusing or delaying our requests for premarket approval of new products or modified products;
- withdrawing PMA that have already been granted;
- refusal to grant export approval for our products; or

• criminal prosecution.

Any of these sanctions could have a material adverse effect on our reputation, business, results of operations, and financial condition.

Our products and operations are subject to extensive governmental regulation both in the United States and abroad, and our failure to comply with applicable requirements could cause our business to suffer.

Our medical device and biologic products and operations are subject to extensive regulation by the FDA and various other federal, state, and foreign governmental authorities. Government regulation of medical devices and biologic products is meant to assure their safety and effectiveness, and includes regulation of, among other things:

- design, development, and manufacturing;
- testing, labeling, content, and language of instructions for use and storage;
- clinical trials;
- product safety;
- marketing, sales, and distribution;
- regulatory clearances and approvals including premarket clearance and approval;
- conformity assessment procedures;
- product traceability and record keeping procedures;
- advertising and promotion;
- product complaints, complaint reporting, recalls, and field safety corrective actions;
- post-market surveillance, including reporting of deaths or serious injuries, and malfunctions that, if they were to recur, could lead to death or serious injury;
- post-market studies; and
- product import and export.

The regulations to which we are subject are complex and have tended to become more stringent over time. Regulatory changes could impede our ability to carry on or expand our operations and could result in higher than anticipated costs or lower than anticipated sales.

Before we can market or sell a new regulated medical device product in the United States, we must obtain clearance under Section 510(k) of the FDCA, approval of a PMA, or approval of an HDE, unless the device is specifically exempt from premarket review. Our *Neuro-Spinal Scaffold* implant is expected to be regulated by the FDA as a Class III medical device, requiring either PMA or HDE approval. A HUD designation was granted for the *Neuro-Spinal Scaffold* implant in 2013, opening the HDE pathway.

In the PMA process, the FDA must determine that a proposed device is safe and effective for its intended use based, in part, on extensive data, including, but not limited to, technical, preclinical, clinical trial, manufacturing, and labeling data.

Modifications to products that are approved through an HDE or PMA generally need FDA approval. The process of obtaining an HDE or PMA is costly and generally takes from 1 to 3 years, or even longer, from the time the application is submitted to the FDA until an approval is obtained.

An HDE application is similar in form and content to a PMA and, although exempt from the effectiveness requirements of a PMA, an HDE does require sufficient information for the FDA to determine that the device does not pose an unreasonable or significant risk of illness or injury, and that the probable benefit to health outweighs the risk of injury or illness from its use. Like a PMA, changes to HDE devices generally need FDA approval.

Biological products must satisfy the requirements of the Public Health Services Act and its implementing regulations. In order for a biologic product to be legally marketed in the U.S., the product must have a biologics license applicable approved by the FDA. The testing and approval process requires substantial time, effort, and financial resources, and each may take several years to complete.

The FDA can delay, limit, or deny clearance or approval of a product for many reasons, including:

- we may not be able to demonstrate to the FDA's satisfaction that our products are safe and effective for their intended uses;
- the data from our preclinical studies and clinical trials may be insufficient to support clearance or approval, where required; and
- the manufacturing process or facilities we use may not meet applicable requirements.

In addition, the FDA may change its clearance and approval policies, adopt additional regulations or revise existing regulations, or take other actions that may prevent or delay approval or clearance of our products under development or impact our ability to modify our currently approved or cleared products on a timely basis.

Further, even after we have obtained the proper regulatory clearance or approval to market a product, the FDA may require us to conduct post-marketing studies. Failure to conduct required studies in a timely manner could result in the revocation of approval for the product that is subject to such a requirement and could also result in the recall or withdrawal of the product, which would prevent us from generating sales from that product in the United States.

Failure to comply with applicable laws and regulations could jeopardize our ability to sell our products and result in enforcement actions such as:

- warning letters;
- fines;
- injunctions;
- civil penalties;
- termination of distribution;
- recalls or seizures of products;
- delays in the introduction of products into the market;
- total or partial suspension of production;
- refusal of the FDA or other regulators to grant future clearances or approvals;
- withdrawals or suspensions of current clearances or approvals, resulting in prohibitions on sales of our products; and/or
- in the most serious cases, criminal penalties.

Any of these sanctions could result in higher than anticipated costs or lower than anticipated sales and have a material adverse effect on our reputation, business, results of operations, and financial condition.

If our products, or the malfunction of our products, cause or contribute to a death or a serious injury before or after approval, we will be subject to medical device reporting regulations, which can result in voluntary corrective actions or agency enforcement actions.

Under the FDA medical device reporting regulations, medical device manufacturers with approved products are required to report to the FDA information that a device has or may have caused or contributed to a death or serious injury or has malfunctioned in a way that would likely cause or contribute to death or serious injury if the malfunction of the device or 1 of our similar devices were to recur. Any such serious adverse event involving our products could result in future voluntary corrective actions, such as recalls or customer notifications, or agency action, such as inspection or enforcement action. In the context of our ongoing clinical trial, we report adverse events to the FDA in accordance with IDE regulations and to other relevant regulatory authorities in accordance with applicable national and local regulations. Any corrective action, whether voluntary or involuntary, and either pre- or post-market, needed to address any serious adverse events will require the dedication of our time and capital, distract management from operating our business, and may harm our reputation and financial results.

Our products, once approved, may in the future be subject to product recalls. A recall of our products, either voluntarily or at the direction of the FDA, or the discovery of serious safety issues with our products, could have a significant adverse impact on us.

If our products are approved for commercialization, the FDA and similar foreign governmental authorities have the authority to require the recall of commercialized products in the event of material deficiencies or defects in design or manufacture. In the case of the FDA, the decision to require a recall must be based on an FDA finding that there is reasonable probability that the device would cause serious injury or death. A government-mandated or voluntary recall by us or 1 of our partners could occur as a result of an unacceptable risk to health, component failures, malfunctions, manufacturing errors, design or labeling defects, or other deficiencies and issues. Recalls of any of our commercialized products would divert managerial and financial resources and have an adverse effect on our reputation, results of operations, and financial condition, which could impair our ability to manufacture our products in a cost-effective and timely manner in order to meet our customers' demands. We may also be subject to liability claims, be required to bear other costs, or take other actions that may have a negative impact on our future sales and our ability to generate profits.

If we obtain approval for our products, we may be subject to enforcement action if we engage in improper marketing or promotion of our products.

We are not permitted to promote or market our investigational products. After approval, our promotional materials and training methods must comply with FDA and other applicable laws and regulations, including the prohibition of the promotion of unapproved, or off-label, use. Surgeons may use our products off-label, as the FDA does not restrict or regulate a surgeon's choice of treatment within the practice of medicine. However, if the FDA determines that our promotional materials or training constitutes promotion of an off-label use, it could request that we modify our training or promotional materials or subject us to regulatory or enforcement actions, including the issuance of an untitled letter, a warning letter, injunction, seizure, civil fine, or criminal penalties. It is also possible that other federal, state, or foreign enforcement authorities might take action if they consider our promotional or training materials to constitute promotion of an off-label use, which could result in significant fines or penalties under other statutory authorities, such as laws prohibiting false claims for reimbursement. In that event, our reputation could be damaged and adoption of the products could be impaired. In addition, the off-label use of our products may increase the risk of product liability claims. Product liability claims are expensive to defend and could divert our management's attention, result in substantial damage awards against us, and harm our reputation.

If we obtain approval for our products, their commercial success will depend in part upon the level of reimbursement we receive from third parties for the cost of our products to users.

The commercial success of any product will depend, in part, on the extent to which reimbursement for the costs of our products and related treatments will be available from third-party payers such as government health administration authorities, private health insurers, managed care programs, and other organizations. Adequate third-party insurance coverage may not be available for us to establish and maintain price levels that are sufficient for us to continue our business or for realization of an appropriate return on investment in product development.

Legislative or regulatory reform of the healthcare systems in which we operate may affect our ability to commercialize our product candidates and could adversely affect our business.

The government and regulatory authorities in the United States, the European Union, and other markets in which we plan to commercialize our product candidates may propose and adopt new legislation and regulatory requirements relating to the approval, Conformité Européenne (CE) or European Union marking, manufacturing, promotion, or reimbursement of medical device and biologic products. It is impossible to predict whether legislative changes will be enacted or applicable regulations, guidance, or interpretations changed, and what the impact of such changes, if any, may be. Such legislation or regulatory requirements, or the failure to comply with such, could adversely impact our operations and could have a material adverse effect on our business, financial condition, and results of operations.

The FDA's and other regulatory authorities' policies may change and additional government regulations may be promulgated that could prevent, limit or delay regulatory clearance or approval of our product candidates. We cannot predict the likelihood, nature or extent of government regulation that may arise from future legislation or administrative action, either in the United States or abroad. Certain policies of the current or future administrations may impact our business and industry. For example, the Trump administration took several executive actions, including the issuance of a number of Executive Orders, that could impose significant burdens on, or otherwise materially delay, FDA's ability to engage in routine oversight activities such as implementing statutes through rulemaking, issuance of guidance, and review and approval of marketing applications. It is difficult to predict how these executive actions will be implemented (to the extent they are not reversed by the new Biden Administration), and the extent to which they will impact the FDA's ability to exercise its regulatory authority. If these executive actions impose restrictions on FDA's ability to engage in oversight and implementation activities in the normal course, our business may be negatively impacted. If we are slow or unable to adapt to changes in existing requirements or the adoption of new requirements or policies, or if we are not able to maintain regulatory compliance, we may lose any marketing approval that we may have obtained and we may not achieve or sustain profitability.

For example, in the United States, legislative changes have been enacted in the past and further changes are proposed that would impact the Patient Protection and Affordable Care Act, or the Affordable Care Act. These new laws may result in additional reductions in Medicare and other healthcare funding. Beginning April 1, 2013, Medicare payments for all items and services, including drugs and biologics, were reduced by 2% under the sequestration (i.e., automatic spending reductions) required by the Budget Control Act of 2011, as amended by the American Taxpayer Relief Act of 2012. Subsequent legislation extended the 2% reduction, on average, to 2025. It is likely that federal and state legislatures within the United States and foreign governments will continue to consider changes to existing healthcare legislation. The Affordable Care Act has faced ongoing legal challenges, including litigation seeking to invalidate some of or all of the law or the manner in which it has been implemented. With the current Presidential administration and Congress, there have been, and may be additional, legislative changes affecting the Affordable Care Act, including repeal of certain provisions of the Affordable Care Act. It remains to be seen, however, precisely what impact legislation to date and any future legislation will have on the availability of healthcare and containing or reducing healthcare costs. We cannot predict the reform initiatives that may be adopted in the future or whether initiatives that have been adopted will be repealed or modified. We cannot quantify or predict with any certainty the likely impact of the Affordable Care Act, its amendment or repeal, or any alternative or related legislation, or any implementation of any such legislation, on our business model, prospects, financial condition, and results of operations.

These and other legislative and regulatory changes that have been or may be proposed in the future may impact our ability to successfully commercialize our product candidates.

We have limited experience manufacturing our Neuro-Spinal Scaffold implant for clinical-study scale and no experience for commercial scale.

To date, we have manufactured our *Neuro-Spinal Scaffold* implant on a small scale, including sufficient supply that is needed for our clinical studies. We may encounter unanticipated problems in the scale-up process that will result in delays in the manufacturing of the *Neuro-Spinal Scaffold* implant and therefore delay our clinical studies. During our clinical trials, we are subject to FDA regulations requiring manufacturing of our scaffolds with the FDA requirements for design controls and subject to inspections by regulatory agencies. Our failure to comply with applicable regulations may result in delays and interruptions to our product supply while we seek to secure another supplier that meets all regulatory requirements. If we are unable to scale up our manufacturing to meet requirements for our clinical studies, we may be required to rely on contract manufacturers. Reliance on third-party manufacturers entails risks to which we would not be subject if we manufactured the product ourselves, including the possible breach of the manufacturing agreements by the third parties because of factors beyond our control, and the possibility of termination or nonrenewal of the agreements by the third parties because of our breach of the manufacturing agreement or based on their own business priorities.

Risks Related to Our Intellectual Property

We license certain technology underlying the development of our Neuro-Spinal Scaffold implant from BCH and MIT, and the loss of the license would result in a material adverse effect on our business, financial position, and operating results and cause the market value of our common stock to decline.

We license technology from BCH and MIT that is integrated into our *Neuro-Spinal Scaffold* implant under an exclusive license. Under the license agreement, we have agreed to milestone payments and to meet certain reporting obligations. In the event that we were to breach any of the obligations under the agreement and fail to cure timely, BCH and MIT would have the right to terminate the agreement upon notice. In addition, BCH and MIT have the right to terminate our license upon the bankruptcy or receivership of the Company. If we are unable to continue to use or license this technology on reasonable terms, or if this technology fails to operate properly, we may not be able to secure alternatives in a timely manner and our ability to develop our products could be harmed.

If we cannot protect, maintain and, if necessary, enforce our intellectual property rights, our ability to develop and commercialize products will be adversely impacted.

Our success, in large part, depends on our ability to protect and maintain the proprietary nature of our technology. We and our licensors must prosecute and maintain our existing patents and obtain new patents. Some of our proprietary information may not be patentable, and there can be no assurance that others will not utilize similar or superior solutions to compete with us. We cannot guarantee that we will develop proprietary products that are patentable, and that, if issued, any patent will give a competitive advantage or that such patent will not be challenged by third parties. The process of obtaining patents can be time consuming with no certainty of success, as a patent may not issue or may not have sufficient scope or strength to protect the intellectual property it was intended to protect. We cannot assure you that our means of protecting our proprietary rights will suffice or that others will not independently develop competitive technology or design around patents or other intellectual property rights issued to us. Even if a patent is issued, it does not guarantee that it is valid or enforceable. Any patents that we or our licensors have obtained or obtain in the future may be challenged, invalidated, or unenforceable. If necessary, we may initiate actions to protect our intellectual property, which can be costly and time consuming.

If third parties successfully claim that we infringe their intellectual property rights, our ability to continue to develop and commercialize products could be delayed or prevented.

Third parties may claim that we or our licensors are infringing on or misappropriating their proprietary information. Other organizations are engaged in research and product development efforts that may overlap with our products. Such third parties may currently have, or may obtain in the future, legally blocking proprietary rights,

including patent rights, in 1 or more products or methods under development or consideration by us. These rights may prevent us from commercializing products, or may require us to obtain a license from the organizations to use the technology. We may not be able to obtain any such licenses that may be required on reasonable financial terms, if at all, and cannot be sure that the patents underlying any such licenses will be valid or enforceable. There may be rights that we are not aware of, including applications that have been filed but not published that, when issued, could be asserted against us. These third parties could bring claims against us that would cause us to incur substantial expenses and, if successful, could cause us to pay substantial damages. Further, if a patent infringement suit were brought against us, we could be forced to stop or delay research and development of the product that is the subject of the suit. Furthermore, because of the substantial amount of discovery required in connection with intellectual property litigation, there is a risk that some of our trade secrets or other confidential information could be compromised by disclosure during this type of litigation.

Risks Related to our Dependence on Third Parties

We will depend upon strategic relationships to develop, exploit, and manufacture our products. If these relationships are not successful, we may not be able to capitalize on the market potential of these products.

The near and long-term viability of our products will depend, in part, on our ability to successfully establish new strategic collaborations with biotechnology companies, hospitals, insurance companies, and government agencies. Establishing strategic collaborations is difficult and time-consuming. Potential collaborators may reject collaborations based upon their assessment of our financial, regulatory, or intellectual property position. If we fail to establish a sufficient number of collaborations on acceptable terms, we may not be able to commercialize our products or generate sufficient revenue to fund further research and development efforts.

Even if we establish new collaborations, these relationships may never result in the successful development or commercialization of any of our product candidates for reasons both within and outside of our control.

There are a limited number of suppliers that can provide materials to us. Any problems encountered by such suppliers may detrimentally impact us.

We rely on third-party suppliers and vendors for certain of the materials used in the manufacture of our products or other of our product candidates. Any significant problem experienced by 1 of our suppliers could result in a delay or interruption in the supply of materials to us until such supplier resolves the problem or an alternative source of supply is located. Any delay or interruption could negatively affect our operations.

If the third parties on which we rely to conduct our laboratory testing, animal, and human clinical trials do not perform as contractually required or expected, we may not be able to obtain regulatory approval for or commercialize our products.

We have been, and will continue to be, dependent on third-party CROs, medical institutions, investigators, and contract laboratories to conduct certain activities related to our laboratory testing and animal and human clinical studies. We are responsible for confirming that each of our clinical trials is conducted in accordance with our approved plan and protocol. Moreover, the FDA and foreign regulatory agencies require us to comply with regulations and standards, commonly referred to as good clinical practices, for conducting, recording, and reporting the results of clinical trials to assure that data and reported results are credible and accurate and that the trial participants are adequately protected. Our reliance on these third parties does not relieve us of these responsibilities and requirements. If these third parties do not successfully carry out their contractual duties or regulatory obligations or meet expected deadlines, if the third parties need to be replaced, or if the quality or accuracy of the data they obtain is compromised due to the failure to adhere to our clinical protocols or regulatory requirements or for other reasons, our preclinical development activities or clinical trials may be extended, delayed, suspended, or terminated, and we may not be able to obtain regulatory approval or successfully commercialize our products on a timely basis, if at all, and our business, operating results, and prospects may be adversely affected.

Risks Related to Employee Matters and Managing Growth

Our success depends on our ability to retain our management and other key personnel.

We depend on our senior management as well as key scientific personnel. We have implemented restructurings that have significantly reduced our workforce, leaving only key positions filled. On February 2, 2018, we appointed Richard Toselli M.D. as President, Chief Executive Officer, and a director. On January 14, 2019, we appointed Richard Christopher as Chief Financial Officer and Treasurer. The loss of any members of senior management or key scientific personnel could harm our business and significantly delay or prevent the achievement of research, development, or business objectives. Competition for qualified employees is intense among biotechnology companies, and the loss of qualified employees, or an inability to attract, retain, and motivate additional highly skilled employees could hinder our ability to successfully develop marketable products.

Our future success also depends on our ability to identify, attract, hire, train, retain, and motivate other highly skilled scientific, technical, marketing, managerial, and financial personnel. Although we will seek to hire and retain qualified personnel with experience and abilities commensurate with our needs, there is no assurance that we will succeed despite our collective efforts. The loss of the services of any of our senior management or other key personnel could hinder our ability to fulfill our business plan and further develop and commercialize our products and services. Competition for personnel is intense, and any failure to attract and retain the necessary technical, marketing, managerial, and financial personnel would have a material adverse effect on our business, prospects, financial condition, and results of operations.

We may be subject to claims that our employees, consultants, or independent contractors have wrongfully used or disclosed confidential information of third parties.

We have received confidential and proprietary information from collaborators, prospective licensees, and other third parties. In addition, we employ individuals who were previously employed at other biotechnology or pharmaceutical companies. We may be subject to claims that we or our employees, consultants, or independent contractors have inadvertently or otherwise used or disclosed confidential information of these third parties or our employees' former employers. We may also be subject to claims that former employees, collaborators, or other third parties have an ownership interest in our patents or other intellectual property. We may be subject to ownership disputes in the future arising, for example, from conflicting obligations of consultants or others who are involved in developing our product candidates. Litigation may be necessary to defend against these claims. If we fail in defending any such claims, in addition to paying monetary damages, we may lose valuable intellectual property rights, such as exclusive ownership of, or right to use, valuable intellectual property. Such an outcome could have a material adverse effect on our business. Even if we are successful in defending against these claims, litigation could result in substantial cost and be a distraction to our management and employees.

Risks Related to Litigation and Legal Compliance

We may face, and in the past have faced, lawsuits, which could divert management's attention and harm our business.

We may face, and in the past have faced, lawsuits, including class action or securities derivative lawsuits. The amount of time that is required to resolve these lawsuits is unpredictable and any lawsuits may divert management's attention from the day-to-day operations of our business, which could adversely affect our business, results of operations, and cash flows. Any litigation or claim against us, even those without merit, may cause us to incur substantial costs, and could place a significant strain on our financial resources, divert the attention of management from our core business and harm our reputation.

We face potential product liability claims, and, if successful claims are brought against us, we may incur substantial liability and costs.

We will have exposure to claims for product liability. Product liability coverage for the healthcare industry is expensive and sometimes difficult to obtain. We may not be able to maintain such insurance on acceptable terms or be able to secure increased coverage if the commercialization of our products progresses, nor can we be sure that existing or

future claims against us will be covered by our product liability insurance. Moreover, the existing coverage of our insurance policy or any rights of indemnification and contribution that we may have may not be sufficient to offset existing or future claims. A successful claim may prevent us from obtaining adequate product liability insurance in the future on commercially desirable terms, if at all. Even if a claim is not successful, defending such a claim would be time-consuming and expensive, may damage our reputation in the marketplace, and would likely divert our management's attention.

We are subject to environmental, health, and safety laws. Failure to comply with such environmental, health, and safety laws could cause us to become subject to fines or penalties or incur costs that could have a material adverse effect on the success of our business.

We are subject to various environmental, health, and safety laws and regulations, including those relating to safe working conditions, laboratory, and manufacturing practices, the experimental use of animals and humans, emissions and wastewater discharges, and the use and disposal of hazardous or potentially hazardous substances used in connection with our research. Any of these laws or regulations could cause us to incur additional expense or restrict our operations. Compliance with environmental laws and regulations may be expensive, and current or future environmental regulations may impair our research and development efforts.

Our relationships with customers and third party payers will be subject to applicable anti-kickback, fraud and abuse, and other healthcare laws and regulations, which could expose us to criminal sanctions, civil penalties, program exclusion, contractual damages, reputational harm, and diminished profits and future earnings.

Healthcare providers, physicians, and third-party payers will play a primary role in the recommendation and use of our products and any other product candidates for which we obtain marketing approval. Our future arrangements with healthcare providers, physicians, and third-party payers may expose us to broadly applicable fraud and abuse and other healthcare laws and regulations that may constrain the business or financial arrangements and relationships through which we market, sell, and distribute any products for which we obtain marketing approval. Restrictions under applicable federal and state healthcare laws and regulations include the following:

- the federal Anti-Kickback Statute prohibits, among other things, persons from knowingly and willfully
 soliciting, offering, receiving, or providing remuneration, directly or indirectly, in cash or in kind, to induce
 or reward, or in return for, either the referral of an individual for, or the purchase, order, or recommendation
 or arranging of, any good or service, for which payment may be made under a federal healthcare program
 such as Medicare and Medicaid;
- the federal False Claims Act imposes criminal and civil penalties, including through civil whistleblower or
 qui tam actions, against individuals or entities for, among other things, knowingly presenting, or causing to be
 presented, false or fraudulent claims for payment by a federal healthcare program or making a false statement
 or record material to payment of a false claim or avoiding, decreasing, or concealing an obligation to pay
 money to the federal government, with potential liability including mandatory treble damages and significant
 per-claim penalties;
- the federal Health Insurance Portability and Accountability Act of 1996 ("HIPAA"), imposes criminal and civil liability for executing a scheme to defraud any healthcare benefit program or making false statements relating to healthcare matters;
- HIPAA, as amended by the Health Information Technology for Economic and Clinical Health Act and its
 implementing regulations, also imposes obligations, including mandatory contractual terms, with respect to
 safeguarding the privacy, security, and transmission of individually identifiable health information;
- the federal Physician Payments Sunshine Act requires applicable manufacturers of covered products to report
 payments and other transfers of value to physicians and teaching hospitals; and
- analogous state and foreign laws and regulations, such as state anti-kickback and false claims laws and transparency statutes, may apply to sales or marketing arrangements and claims involving healthcare items or services reimbursed by non-governmental third-party payers, including private insurers.

Some state laws require device companies to comply with the industry's voluntary compliance guidelines and the relevant compliance guidance promulgated by the federal government and may require product manufacturers to report information related to payments and other transfers of value to physicians and other healthcare providers or marketing expenditures. State and foreign laws also govern the privacy and security of health information in some circumstances, many of which differ from each other in significant ways and often are not preempted by HIPAA, thus complicating compliance efforts.

If our operations are found to be in violation of any of the laws described above or any governmental regulations that apply to us, we may be subject to penalties, including civil and criminal penalties, damages, fines, and the curtailment or restructuring of our operations. Any penalties, damages, fines, curtailment, or restructuring of our operations could adversely affect our financial results. If any such actions are instituted against us and we are not successful in defending ourselves or asserting our rights, those actions could have a significant impact on our business, including the imposition of significant fines or other sanctions.

Efforts to ensure that our business arrangements with third parties will comply with applicable healthcare laws and regulations will involve substantial costs. It is possible that governmental authorities will conclude that our business practices may not comply with current or future statutes, regulations, or case law involving applicable fraud and abuse or other healthcare laws and regulations. If our operations are found to be in violation of any of these laws or any other governmental regulations that may apply to us, we may be subject to significant civil, criminal, and administrative penalties, damages, fines, imprisonment, exclusion of products from government funded healthcare programs, such as Medicare and Medicaid, and the curtailment or restructuring of our operations. If any of the physicians or other healthcare providers or entities with whom we expect to do business is found to be not in compliance with applicable laws, they may be subject to criminal, civil, or administrative sanctions, including exclusions from government funded healthcare programs.

Our operations and reputation may be impaired if our information technology systems fail to perform adequately or if we are the subject of a data breach or cyber-attack.

Our information technology systems are important to operating our business. We rely on our information technology systems, some of which are or may be managed or hosted by or out-sourced to third party service providers, to manage our business data and other business processes. If we do not allocate and effectively manage the resources necessary to build, sustain, and protect appropriate information technology systems and infrastructure, or we do not effectively implement system upgrades or oversee third party service providers, our business or financial results could be negatively impacted. The failure of our information technology systems to perform as we anticipate could disrupt our business and could result in transaction or reporting errors and processing inefficiencies causing our business and results of operations to suffer.

Furthermore, our information technology systems may be vulnerable to cyber-attacks or other security incidents, service disruptions, or other system or process failures. Such incidents could result in unauthorized access to information including vendor, consumer or other company confidential data as well as disruptions to operations. We have experienced in the past, and expect to continue to experience, cybersecurity threats and incidents, although to date none has been material. To address the risks to our information technology systems and data, we maintain an information security program that includes updating technology, developing security policies and procedures, implementing and assessing the effectiveness of controls, conducting risk assessments of third-party service providers and designing business processes to mitigate the risk of such breaches. There can be no assurance that these measures will prevent or limit the impact of a future incident. Moreover, the development and maintenance of these measures requires continuous monitoring as technologies change and efforts to overcome security measures evolve. If we are unable to prevent or adequately respond to and resolve an incident, it may have a material, negative impact on our operations or business reputation, and we may experience other adverse consequences such as loss of assets, remediation costs, litigation, regulatory investigations, and the failure by us to retain or attract customers following such an event. Additionally, we rely on services provided by third-party vendors for certain information technology processes and functions, which makes our operations vulnerable to a failure by any one of these vendors to perform adequately or maintain effective internal controls.

Risks Related to Investment in Our Securities

The price of our common stock has been and may continue to be volatile, which could lead to losses by investors and costly securities litigation.

The trading price of our common stock is likely to be highly volatile and could fluctuate in response to factors such as:

- the status, completion, and/or results of our clinical trials;
- actual or anticipated variations in our operating results;
- announcement of the commencement or completion of securities offerings by us;
- announcements of developments by us or our competitors;
- regulatory actions regarding our products;
- announcements by us or our competitors of significant acquisitions, strategic partnerships, joint ventures, or capital commitments;
- adoption of new accounting standards affecting our industry;
- additions or departures of key personnel;
- sales of our common stock or other securities in the open market; and
- other events or factors, many of which are beyond our control.

The stock market is subject to significant price and volume fluctuations. In the past, following periods of volatility in the market price of a company's securities, securities class action litigation has often been initiated against such company. Litigation initiated against us, whether or not successful, could result in substantial costs and diversion of our management's attention and resources, which could harm our business and financial condition.

In the foreseeable future, we do not intend to pay cash dividends on shares of our common stock so any investor gains will be limited to the value of our shares.

We currently anticipate that we will retain future earnings for the development, operation, and expansion of our business and do not anticipate declaring or paying any cash dividends for the foreseeable future. Any gains to stockholders will therefore be limited to the increase, if any, in our share price.

In the event that we fail to satisfy any of the listing requirements of the Nasdaq Capital Market, our common stock may be delisted, which could affect our market price and liquidity.

Our common stock is listed on the Nasdaq Capital Market. For continued listing on the Nasdaq Capital Market, we will be required to comply with the continued listing requirements, including the minimum market capitalization standard, the corporate governance requirements and the minimum closing bid price requirement, among other requirements. For example, we have received deficiency letters due to the failure to maintain the minimum bid price and the failure to meet stockholder equity requirements, including the deficiency letter from the Listings Qualifications Department of the Nasdaq Stock Market letter we received on July 17, 2019 notifying us that, for the last 30 consecutive business days, the bid price for our common stock had closed below the minimum \$1.00 per share requirement for continued inclusion on the Nasdaq Capital Market. On January 10, 2020, under Nasdaq Listing Rule 5810(c)(3)(A)(ii), the Company provided written notice to Nasdaq of its intention to cure the deficiency, and on January 14, 2020, in accordance with Nasdaq Listing Rule 5810(c)(2)(B), we were provided an additional 180 calendar day compliance period, or until July 13, 2020, to regain compliance with the bid price requirement. On February 11, 2020, to address the

2019 July deficiency letter, we implemented a 1-for-30 reverse stock split of our common stock and a proportionate reduction in our authorized common stock. On February 28, 2020, we received a letter (the "Compliance Letter") from the Listing Qualifications department of Nasdaq notifying us that we have regained compliance with the Minimum Bid Price Requirement, and therefore, Nasdaq considered the matter closed. On December 4, 2020, we received a deficiency letter from the Listings Qualifications Department of the Nasdaq Stock Market notifying us that, for the last 30 consecutive business days, the bid price for our common stock had closed below the minimum \$1.00 per share requirement for continued inclusion on the Nasdaq Capital Market. On February 1, 2021, we received a letter (the "February 2021 Compliance Letter") from the Listing Qualifications department of Nasdaq notifying us that we have regained compliance with the Minimum Bid Price Requirement, and therefore, Nasdaq considered the matter closed. Even if we remain in compliance with the Minimum Bid Price Requirement, we may decide to implement a reverse stock split to further ensure that we remain in compliance with the Minimum Bid Price Requirement. Regardless, there can be no assurance that we will maintain compliance with the bid price requirement, or that we will continue to be in compliance with the other continued listing requirements of the Nasdaq Capital Market. [Since April 7, 2021, our common stock has maintained a minimum closing bid price below \$1.00 per share. If the bid price for our common stock remains below \$1.00 for 30 consecutive business days, we will again be provided with a 180-day period to regain compliance in accordance with Nasdaq Listing Rule 5810(c)(3)(A).]

In the event that we fail to regain compliance or satisfy any of the listing requirements of the Nasdaq Capital Market, our common stock may be delisted. If our securities are delisted from trading on the Nasdaq Capital Market, and we are not able to list our securities on another exchange our securities could be quoted on the OTC Bulletin Board or on the "pink sheets." As a result, we could face significant adverse consequences including:

- a limited availability of market quotations for our securities;
- a determination that our common stock is a "penny stock," which would require brokers trading in our common stock to adhere to more stringent rules and possibly result in a reduced level of trading activity in the secondary trading market for our securities;
- a limited amount of news and analyst coverage
- a limited ability to raise capital to continue to fund our operations by selling shares; and
- a limited ability to acquire other companies or technologies by using our shares as consideration.

Anti-takeover effects of certain provisions of our articles of incorporation and Nevada state law may discourage or prevent a takeover.

Our articles of incorporation divide our Board of Directors into 3 classes, with 3-year staggered terms. The classified board provision could increase the likelihood that, in the event an outside party acquired a controlling block of our stock, incumbent directors nevertheless would retain their positions for a substantial period, which may have the effect of discouraging, delaying, or preventing a change in control. In addition, Nevada has a business combination law, which prohibits certain business combinations between Nevada publicly traded corporations, or Nevada corporations that elect to be subject to the law, and "interested stockholders" for 2 years after the interested stockholder first becomes an interested stockholder, unless the corporation's board of directors approves the transaction by which the stockholder becomes an interested stockholder in advance, or the proposed combination in advance of the stockholder becoming an interested stockholder.

The proposed combination may be approved after the stockholder becomes an interested stockholder with preapproval by the board of directors and a vote at a special or annual meeting of stockholders holding at least 60% of the voting power not owned by the interested stockholder or his/her/its affiliates or associates. After the 2 year moratorium period, additional stockholder approvals or fair value requirements must be met by the interested shareholder up to 4 years after the stockholder became an interested stockholder. In addition, we may become subject to Nevada's control share laws. A corporation is subject to Nevada's control share law if it has more than 200 stockholders, at least 100 of whom are stockholders of record and residents of Nevada, and if the corporation does business in Nevada, including through an affiliated corporation. This control share law may have the effect of discouraging corporate

takeovers. Currently, we believe that we have less than 100 stockholders of record who are residents of Nevada, and are therefore not subject to the control share laws.

The provisions of our articles of incorporation and Nevada's business combination and control share laws make it more difficult for a third party to acquire us and make a takeover more difficult to complete, even if such a transaction were in our stockholders' interest or might result in a premium over the market price for our common stock.

Failure to maintain an effective system of internal controls could result in material misstatements of our financial statements or cause us to fail to meet our reporting obligations or fail to prevent fraud in which case, our stockholders could lose confidence in our financial reporting, which would harm our business and could negatively impact the price of our stock.

We are required to comply with the internal control evaluation and certification requirements of Section 404 of the Sarbanes-Oxley Act of 2002 ("SOX") and management is required to report annually on our internal control over financial reporting. Our independent registered public accounting firm will not be required to formally attest to the effectiveness of our internal control over financial reporting pursuant to Section 404 of SOX until the date we have a public float of \$75 million or greater and \$100 million or greater in revenue.

If we fail to maintain effective internal controls and procedures for financial reporting, it could result in material misstatements in the annual or interim financial statements that would not be prevented or detected in a timely manner. We cannot assure you that material weaknesses or significant deficiencies will not occur in the future and that we will be able to remediate such weaknesses or deficiencies in a timely manner, which could impair our ability to accurately and timely report our financial position, results of operations or cash flows.

We are a "smaller reporting company," and the reduced disclosure requirements applicable to smaller reporting companies may make our common stock less attractive to investors.

We are considered a "smaller reporting company" under Rule 12b-2 of the Exchange Act. We are therefore entitled to rely on certain reduced disclosure requirements, such as an exemption from providing selected financial data and executive compensation information. These exemptions and reduced disclosures in our SEC filings due to our status as a smaller reporting company also mean our auditors are not required to review our internal control over financial reporting and may make it harder for investors to analyze our results of operations and financial prospects. We cannot predict if investors will find our common stock less attractive because we may rely on these exemptions. If some investors find our common stock less attractive as a result, there may be a less active trading market for our common stock and our common stock prices may be more volatile. We will remain a smaller reporting company until our public float exceeds \$250 million or our annual revenues exceed \$100 million with a public float greater than \$700 million.

Item 2. Unregistered Sales of Equity Securities and Use of Proceeds

Recent Issuances of Unregistered Securities

We did not issue any shares of our common stock or warrants to purchase shares of our common stock, or restricted stock awards, during the period covered by this Quarterly Report on Form 10-Q that were not registered under the Securities Act and that have not otherwise been described in a Current Report on Form 8-K.

Issuer Purchases of Equity Securities

None.

SARBANES-OXLEY SECTION 302(a) CERTIFICATION

- I, Richard Toselli, certify that:
- 1. I have reviewed this Quarterly Report on Form 10-Q of InVivo Therapeutics Holdings Corp.;
- 2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
- 3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;
- 4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:
 - (a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
 - (b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
 - (c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
 - (d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and
- 5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):
 - (a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and
 - (b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.
